HI-FI & BROADCASTING COMPONENTS

ULTRACOMPACT* HI-FI AUDIOS

Small light weight, wide range units. Level ± 15 dbm except where otherwise noted. Top and bottom mounting. Die cast case, $1\frac{1}{2}'' \times 1\frac{1}{2}'' \times 2''$ h. Weight, $\frac{1}{2}$ lb.

**HIPERMALLOY®
TRANSFORMERS**

Hipermalloy audio and power transformers are specifically designed for portable and compact service. High fidelity though light in weight and dependable. The frequency characteristic of the Hiper-malloy audio units is uniform from 20 to 20,000 cycles. They incorporate a Hipermalloy nickel iron core and hum balanced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, arranged for mounting with the terminals unbrazed or down. DC in Primary

LINEAR STANDARD* TRANSFORMERS

Guaranteed frequency response of ± 1 db 20-20,000 cps, ± 1 db 7-50,000 cps on high level units, make these ideal transformers for uniform frequency response and low distortion. High efficiency and dependability through shielding. Top and bottom mounting.

LOW LEVEL TRANSFORMERS

Type LS-1 case, 2 $\frac{5}{8}$ " x 3 $\frac{1}{8}$ " x 3 $\frac{1}{4}$ " h. Suffix X indicates multiple alloy shield. Weight, 3 lbs.

PLATE TRANSFORMERS

Primaries for 105, 115, 220, 230 volts; 50/60 cycles. For reduced power, secondary can be cut in half, using 220 v. primary on 110 volts; may be used on 25 to 43 cycles in this case. "W" suffix units designed for full wave center tap and full wave bridge application. Center tap may be disconnected from ground.

MINIATURE, OUNCER, SUBOUNCER & SUB-SUBOUNCER UNITS

SUBOUNCER* & SUB-SUBOUNCER* AUDIO TRANSFORMERS
TRANSISTOR & TUBE TYPES HERMETICALLY SEALED

Designed, Manufactured and Successfully Tested to complete MIL - T - 27B Specifications.

UTC SSO-#P and SO-#P units are ideal miniaturized components having high efficiency and wide frequency response. Special nickel iron core materials and winding methods provide exceptional performance and reliability.

These units are vacuum molded to MIL Grade 5. They employ 50 mil deeply anchored pin terminals ideally suited for printed circuit and transistor application. Terminals are strong enough to support these light weight units.

The UTC SML-70 is an ultra miniature transformer providing high shielding, extremely low insertion loss with wide band response, 200 cycles to 20 kc. These units are provided with pin terminals (.025 dia.) strong enough to support the unit and are ideal for printed circuits.

SO-#P UNIT

PHOTOFLASH TRANSFORMERS STANDARD 982

Can be used for either standard (Amglo type) or trigger (Sylvania type) multiple flash tubes. Circuit details included with transformer.

PF-1 Primary for 115 volts, 50/60 cycles. Secondaries for power supply delivering 2200 volts DC to capacitor up to 100 Mfd. Compound sealed in G-3 (Pg.11) case 2 1/8 x 2 3/4 (3 3/4 including flanges) x 2 1/2 inches high. Weight 2 lbs. Net Each \$8.40
PF-3 Trigger Transformer 15 KV peak. 7/8 O.D.x3 long. Weight 2 oz. Net each: \$6.00

TRANSISTOR TYPE

These are miniaturized light weight units for transistor type photo-flash supply.

PF-5 Primary for 115 volts, 50/60 cycles or for 4 1/2 V. battery switched by PF-6 inverter transformer. Output delivers 400 V. DC when used in voltage doubler circuit to charge photoflash capacitor (typically 40 watt-sec.). G-1 case (Pg. 11)
Net each: \$8.40

PF-6 Inverter transformer transforms 4 1/2 V. DC from battery to input for PF-5 stepup transformer. Cuncer case (Pg. 11)
Net each: \$5.10

PF-7 Trigger transformer. Shorting .25 mfd. capacitor (charged to approx. 225 V. DC) across terminals 1-2 produces 6 KV pulse at terminal 3 for triggering flash tube. 7/8" Dia. x 1 1/2" H.; Wt. 1/2 oz. Net each: \$3.60

LINE VOLTAGE ADJUSTERS WITH METER (FIG. G. SEE PG. 12)

The perfect answer to abnormal or fluctuating line voltage. Adjust switch so that meter reads at red line and you know that your equipment is working at correct voltage. These units combine a tapped auto-transformer with a switch and meter in a compact, rugged assembly. The nine tap switch provides for line voltage of 60 to 140 volts on 115 volt output models and 160 to 240 volts on 230 volt output model. All units are designed for 50/60 cycles service and come complete with 6 foot input cord and plug and outlet receptacle.

SIGNALING AND CONTROL TRANSFORMERS (FIG. H SEE PG. 12)

Primary 110-120 volts, 50/60 cycles—Secondary

4/8/12/16/20/24 volts

High power transformers suitable for operating relays, sirens horns, gongs, etc. from 115 V. 50/60 cycle line. These units have four secondary terminals providing 4, 8, 12, 16, 20 and 24 volt output. The volt ampere rating is based on the 24 volt secondary tap with corresponding reduction at the lower voltages. Underwriters' approved primary leads are employed, and screw-type binding posts.

AUTOMATIC

AMPERITE

REGULATOR

BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE

AUTOMATIC REGULATION WHAT IT IS

The AMPERITE Ballast-Regulating Tube is an automatic "rheostat" designed to keep the current in a circuit at a definite value, for example, 0.5 amp.

Should the supply voltage increase, the Amperite will automatically increase in resistance enough to take up the increase in supply voltage — keeping the voltage on the load constant. It consists of an iron wire hermetically sealed in a bulb containing hydrogen or helium — the two gases with the highest heat conductivity. Its regulating action is based on the high temperature co-efficient of resistance of the iron wire and the rapid cooling of hydrogen or helium gas.

Being a constant current device, the AMPERITE Ballast-Regulating Tube can be used only to regulate a constant load—fixed wattage. Thermostatic relays can sometimes be included in these regulators to reduce initial surge.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

STANDARD

MINIATURE

Ⓣ = Threshold Current & Voltage

Characteristic curve of a typical Amperite. Approximate curve of any other Amperite can be obtained by multiplying or dividing the current or voltage scale by any number.

AMPERITE NEON LAMP
TYPE NE70V Net \$1.80

GENERAL ADVANTAGES:

- Light, compact • No moving parts • Rugged; will withstand vibration of 10G. minimum
- Hermetically sealed; not affected by altitude or humidity changes • Can be changed as easily as a radio tube • Operates equally well on A.C. or D.C. • Inexpensive

CAPACITIES AVAILABLE

Current values of 60 ma. to 5 amps; threshold voltage 0.4 to 40 V. Maximum dissipation 50w per tube (ST19 bulb). Any number of AMPERITES with the same voltage range can be operated in parallel. AMPERITES should not be used in series.

AGEING

AMPERITE Ballast Tubes may change approximately up to 3% in current if aged for 4 to 8 hours, at maximum voltage. They will change very little thereafter.

LIFE EXPECTANCY

Average life if operated as recommended **2000 Hours**
If operated continuously at maximum voltage **1000 Hours**
If operated continuously at 80% maximum voltage **5000 Hours**
If filament is operated below glow point **5000 Hours up**

In operation, the Amperite filament starts to glow at one point; as the voltage is increased, the glow spreads over the entire filament. Like incandescent lamps, turning Amperite on and off reduces its life, especially if operating near its maximum voltage.

TIME LAG CHARACTERISTICS

Time lag encountered in an Amperite Ballast Tube depends upon the wattage consumed by the ballast and the size of the bulb. Where the wattage is small for the size of the bulb, the action can be made practically instantaneous — less than 1 second. In such cases the bulb will remain at practically ambient temperature. When the wattage is high enough to heat the bulb to a temperature uncomfortable to the hand (160°F) the lag might be as much as several minutes for final readings — but normally reaches within 90% of final readings within a few seconds.

AMPERITE NUMBERING SYSTEM

In general, the AMPERITE number approximately denotes the current-voltage threshold value. For example:

Amperite Number	3-4	3H4	10-7	12-11	12H11
Threshold Current	0.3	0.35	1.0	1.2	1.25
Threshold Voltage	4.0	4.0	7.0	11.0	11.0

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

AUTOMATIC

AMPERITE

REGULATOR

BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE

AMBIENT EFFECTS

Ambient temperature variation of -50° to $+70^{\circ}$ C will change the current value of an Amperite approximately 2% on regulating portion of curve as shown directly below. Being hermetically sealed the Amperite is not affected by altitude or humidity changes.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

Amperite Ballast-Type 6-4 current voltage characteristic under ambient conditions of -55° , 24° , and 85° C. The percentage change with ambient is approximately the same with all type Amperite ballasts.

This diagram illustrates for superior regulating characteristics of the Amperite Ballast-Regulating Tube. **STANDARD SIZES** available for various wattage consumption . . . For good regulation, a bulb should not be required to dissipate more than 50% of maximum wattage.

BATTERY CHARGING AND DISCHARGING

Amperite Ballast Tubes are very successfully used for keeping the current constant in charging and discharging batteries. Any number of Amperites of the same voltage range can be placed in parallel to obtain proper current. The current can be kept to $\pm 1\%$. Advise voltage variation and currents desired.

LINE VOLTAGE

A light, compact, and inexpensive method of obtaining close regulation is to use an Amperite Ballast Tube with an Amperite Neon Lamp — type NE70V. Base octal-base wiring-prongs 2-5. One NE70V is used for all loads up to 100W.

POWER SUPPLIES

We strongly recommend, for any particular application, to fill in and return one of our special problem sheets (ASP 343) and permit us to recommend the most suitable AMPERITE.

POWER SUPPLY	Dry Cells	6 Volts	12 Volts	26 Volts	115 Volts
Supply Variation	2.2-3.0V	5.5-7.5V	11.4-13.8V	22.0-30.0V	105-125V
Desired on Load	1.8-2.0V	3.9-4.1V	6.1- 6.4V	12.4-12.8V	90- 95V
Required on AMPERITE	0.4-1.0V	1.6-3.4V	5.3- 7.4V	9.6-19.2V	15- 30V
Current Variation	.29-.32a	.29-.32a	.29-.32a	.29-.32a	.29-.32a

The above chart shows the maximum load voltage for the given supply to obtain $\pm 2\%$ current regulation on load. Better regulation is obtainable by increasing the voltage across the AMPERITE. Up to a point, the higher the percentage of the supply voltage taken up by the AMPERITE, the better the regulation.

Radio tube filament loads — have low cold resistance which causes a high initial surge. For such loads we recommend a bleeder of 20 to 50% prox. of load and the corresponding AMPERITE. e.g.

FILAMENT LOAD	USE AMPERITE	TOTAL CURRENT
0.3a	4HTF4	0.45a
0.6a	8-4	0.8a
0.7a	9H4	0.95a

On Radio tube filament loads the bleeder will also improve the regulation.

ELECTRONS COMPANY

A Unit of General Signal Corporation

Heat Dissipating Electron Tube Shields

Most tube type electronic equipment failures occur because of tube failures. Tubes fail primarily because of the heat they generate and the environment in which they operate. If tubes are operated at a lower bulb temperature, their life can be extended.

The simple solution to high tube temperature is the application of *heat dissipating tube shields*. The former universally used but now obsolete JAN shield (specifically prohibited by all military services and FAA, although millions are still in use) actually raises bulb temperature above that of the bare tube. The JAN shield was applied to shield tubes electrostatically and retain them in the socket. However, it allows a dead air space between shield and tube that, in effect, traps the heat generated by the tube, raises the bulb temperature and reduces the life of the electron tube.

On the other hand, a tube with an efficient heat dissipating shield will operate cooler in a still air environment than a bare tube in a 500 fpm forced air environment. This is illustrated in Figure 1.

It is conservatively estimated that if effective heat dissipating tube shields were applied to all tubes in the average equipment, at least half of all tube failures would be eliminated with resulting reductions in maintenance and down-time costs.

TRN SERIES HEAT DISSIPATING SHIELDS

IERC's TRN Thermo-rel shield can give you six times longer use of electronic equipment before failure. A full set of TRN shields can frequently be installed in an average piece of test equipment for less than the labor cost of replacing one bad tube. Cost of an individual TRN shield is only a fraction of that of a replacement tube. In spite of the low cost, the TRN shield meets or exceeds all military requirements for heat dissipating tube shields, and is qualified to MIL-S-9372C (USAF). You can increase the reliability and decrease maintenance cost of Hi-Fi or ham gear, test equipment in lab or production line, or the systems, sub-systems and test equipment your company builds, by using IERC heat dissipating tube shields. The IERC TRN shields are designed to replace the obsolete JAN shield, as well as for use in new equipment. A flexible, black cadmium plated beryllium copper liner hugs the bulb of the tube, adapting to variations in bulb contour and diameter. Positive base attachment gives TRN shields superior retention in a shock and vibration environment. Act now—order from your nearest IERC authorized industrial distributor.

General Electric TV picture tubes feature many multipurpose designs that replace several of the most commonly used types. Each SG type replaces a number of other types, as shown in the tables.

All material and parts used in the manufacture of General Electric picture tubes are now except for the envelope (and screen and aperture mask as assembly in the case of color tubes) which, prior to re-use, have been inspected and tested to meet our high quality standards.

NEW G-E INDUSTRIAL TUBE CATALOGS

ETI-719D 25¢

Alpha-numerical listing of G-E replacements for nearly 3,000 types of industrial tubes.

ETI-2387A 25¢

Complete specifications of G-E industrial receiving, communications, 5-Star and ceramic receiving tubes.

ETI-2388A 25¢

Specifications and data on 80 types of G-E Ignitrons and Thyratrons, plus operating guide.

ETI-2389A 25¢

Lists 125 special-purpose and broadcast power tubes and rectifiers, including installation information.

ETR-15L \$1.50

Lists all receiving, TV picture, 5-Star, and small special-purpose tubes, and G-E capacitors.

These Catalogs Are Available From Your General Electric Tube Distributor

PENTA POWER TUBES

When you specify Penta Power Tubes, you can enjoy the same benefits that hundreds of equipment manufacturers and power tube users receive today. The "extra care" production and test methods Penta employs in manufacture result in proven power tube reliability, long life and high efficiency.

Single-pole, double-throw switches enclosed in evacuated glass envelopes. Ideal where compact, fast-acting relays are needed to switch high-voltage circuits under a wide range of ambient atmospheric conditions, including explosive atmospheres; also, where exposed-contact relays would be unsuitable. Operated by external actuating coils excited by direct current. Designed so that soft-iron pole piece and envelope-enclosed armature assembly act to complete the magnetic circuit.

SHIELDMU® TAPE AND FOIL FOR ELECTROMAGNETIC SHIELDING

Table I, at right, lists the currently acceptable magnetic materials used for shielding electronic and electrical components. Stray magnetic fields are easily shunted around sensitive components by use of these high permeability magnetic materials.

Magnetic Metals' SHIELDMU gives the designer a full range of magnetic performance for construction for formed-in-place shields. All SHIELDMU types are available from stock in a number of thicknesses and widths for convenient application; SHIELDMU I is currently available in .006" thickness only.

ECONOMICAL SHIELDING WITH SHIELDMU TAPE AND FOIL

Magnetic Metals' SHIELDMU tapes and foils are fully processed and ready to use; heat-treatment is not required after forming. Formed-in-place shields save time and expense when compared to fabrication of special shields. This is most important where experimental results are urgently required, or where small quantity needs make tooling costs uneconomical. Many manufacturers form shields in place around inductive components to save space and achieve magnetic component isolation. Use of tapes and foils also reduces stocking problems associated with drawn or fabricated component shields.

SELECTING SHIELDMU

Shieldmu is provided in four levels of permeability performance. Each is designed to meet the specific requirements of various shielding applications. Multi-layer shields using different materials often give the most economical result by putting high flux capability materials in the region of the strongest field. The high permeability layers are then most effective at the lower field strengths. Shieldmu with adhesive backing eliminates the necessity of taping or spot welding Shieldmu in place.

The thickness of the adhesive itself (not counting the peel-away paper layer) is nominally .001". Clear in color and chemically stabilized for long term life, the adhesive has a bond strength ranging up to 60 oz. per inch at a 90° pulling angle. It is a rubber-based thermoplastic which may be operated in temperatures up to 300°F.

TABLE I

Typical Class of Material	Trade Designations
50% Nickel-Iron Alloys	Shieldmu 30, Hymu 80, Mumetal, Hipernom
80% Nickel-Iron Alloys	Shieldmu 10, 49 Alloy, 4750, Hipernik, Nicaloi
Silicon-Iron Alloys	Shieldmu 3
Low Carbon Steel	Shieldmu 1

ORDERING INFORMATION:

Shieldmu is carried in stock by your local distributor in twelve-inch square pieces (album packed), as well as in various width and lengths wound on spools. When ordering, please use the part number indicated in the following price lists; each letter and digit is coded to indicate a specific requirement as shown in the examples below:

SHIELDMU wound on spools:

SHIELDMU album packed:

SHIELDMU 30 — (M 30)

Maximum flux 7,000—8,000 gauss. Typical permeabilities—initial 20,000;—maximum 150,000. For maximum attenuation, even at low inductions. M — Prefix — Regular Back ABM — Prefix — Adhesive Back Please order proper prefix.

Now Available . . . 2" SHIELDFLEX FLEXIBLE TUBING

We have now added a larger diameter to our variety of Shieldflex sizes stocked at your local electronic distributor. This heavier, larger tubing is especially valuable in applications involving communications.

Part No.	I.D. (Inches)		Material Thickness (Inches)	Nominal Bend Inside Dia. (Inches)	Nom. Wt. per 100 Ft. Pounds	PRICE LIST per linear foot extended (pulled taut) in random lengths

SHIELDFLEX FLEXIBLE TUBING FOR ELECTROMAGNETIC SHIELDING

Shieldflex tubing is specially designed and constructed to provide both electromagnetic and electrostatic shielding of current carrying conductors. The flexibility of the tubing permits close routing of conductors around components or other conductors, thus effecting space economy so important in miniaturization of components. Production economies are possible also because of the simple operation required—simply run the cable through a length of Shieldflex. Time consuming work of wrapping cables with Shieldmu tape can be reduced by using Shieldflex.

SHIELDFLEX flexible tubing for magnetic shielding is formed from high permeability yellectromagnetic alloys in a spirally wound construction.

DIRECT INTERCHANGEABILITY LIST

This Interchangeability Index has been prepared to assist you in finding exact replacement for electronic tubes in the Industrial, Transmitting and Special Purpose fields.

This listing is believed to be accurate to the date of issue. However, no responsibility is assumed by Westinghouse for its completeness or for its use, nor for any infringement of patents or other rights of third parties which may result from its use.

KEY TO ABBREVIATIONS

CR — Cathode Ray
CS — Camera or Storage
Glow — Glow Tube (Cold Cath.)
GA — Vacuum Gauge
Ig — Ignition
IR — Industrial Receiving
MD — Microwave Device

N — Neutron Detector
Photo — Phototube
Rect — Rectifier
Thyr — Thyatron
Trans. — Transmitting
VR — Voltage Regulator or Reference
HCDD — Hollow Cathode Discharge Device

INDEX OF COMMONLY USED MANUFACTURERS PREFIXES

A Radio Corporation of America
AH Marconi Wireless Telegraph Co.
AX Ampere Electronic Corp.
BL Bomac Laboratories
BR Standard Telephone & Cables Inc.
BT British Thomson-Houston Co.
CE Continental Electric Co.
CK Raytheon Manufacturing Corp.
DET Marconi Wireless Telegraph Co.
DR General Electronics Inc.
EE Electronic Enterprises Inc.
EL Electronics Inc.
F International Telephone & Telegraph
FG General Electric Co.
G General Motors Laboratories Inc.

GUIDE TO BASE DRAWINGS

THYRATRONS

A thyatron is a gas tube having a heated cathode and one or more electrodes which initiate the current flow. The gas content may be one or more of the inert gases, mercury vapor or a combination of these. Mercury-vapor types are used where ambient temperature ranges are small. Inert gas types change characteristics very little with ambient temperature changes and do not require as long a warm-up time before applying anode voltage.

In a high vacuum tube, the negative field of the grid space charge acts to limit the flow of electrons. This space charge is neutralized by positive ions during conduction through a gas or vapor such that the voltage drop through the tube is reduced. With smaller tube losses, the thyatron can conduct more current with less cooling required than an equivalent high vacuum tube.

The grid has no control of the current after conduction starts. With direct current supplied to the anode, it is necessary to reduce the anode voltage below the ionizing potential of the gas fill, long enough for the gas to deionize and stop tube conduction.

With alternating current supplied to the anode, the grid regains control of the current each time the voltage drops to zero and can delay the beginning of conduction to a later point in the next half-cycle by being held at a negative voltage. The grid can exert very fine control of the average current, with alternating current anode and grid supply by varying the phase relation between the voltages impressed on them. The grid circuit requires very little power to control the thyatron compared to the power controlled in the anode circuit.

Thyatrions are used in light duty resistance welders, motor speed and torque controllers, relaxation oscillators, variable voltage power supplies, control circuits of lighting or heating devices, light sensitive relay exciters, and other equipment requiring either precise control of average moderate currents or ability to turn on moderate currents by a small voltage change.

HIGH VACUUM AMPLIFIERS

High vacuum amplifiers are multielectrode tubes with heated cathodes and one or more electrodes which are able to control the current flow through the tube. These types are similar to the high vacuum rectifiers with the addition of control electrodes.

The current is limited by the formation of a negative space charge near the cathode. A positively charged grid will tend to neutralize this space charge permitting more electrons to go to the plate. A negatively charged grid will tend to increase this space charge reducing electron flow and if the grid is sufficiently negative, it will cut off the electron flow. The grid has continuous control of the number of electrons allowed to go to the plate. This controlled power ranges from a few watts in smaller designs to hundreds of thousands of watts in the largest designs. By proper design of the electrode structure, the tube can be made to control more power in the plate circuit than is required in the grid circuit. The tube therefore can act as an amplifier. By feeding back part of the output power to the grid circuit, the tube can be made to generate sustained oscillations. This arrangement is termed an oscillator.

Additional electrodes are employed in tetrodes and pentodes as plate. Electrodes may also be designed to form electrons into beams or sheets. These variations are usually incorporated to overcome inherent faults of the basic triode and to increase the efficiency and

power handling capability of the tube. Some types have two units in one envelope to conserve space, reduce cost, and simplify circuit designs.

The cooling of the tubes handling large amounts of power must be carefully controlled. Radiation with free air convection is employed with types having low dissipation ratings for their size. With these types care must be taken that nearby components are not damaged by directly radiated heat. Tube types with medium size dissipation ratings often have finned radiators soldered to the anode and heat is dissipated by forcing air through the radiator. High vacuum amplifiers with high dissipation ratings are operated either water cooled or vapor cooled. Both groups require water with low mineral content. Cooling system control circuits should be provided to remove power from the tube if cooling is inadequate.

Tubes designed for communications service (such as types 891, 892, 895 and 5606) have thin anode walls and should not be used in industrial heating applications. The wide fluctuation of loading and impedance, inherent in this service, induces parasitic and arc-discharge conditions which require the greater thermal inertia of a thick anode wall. Overload and arc sensing circuits designed to remove or divert power from the tube within 5 cycles of energy are also essential.

High vacuum amplifiers are used to generate, amplify or modulate audio or radio frequencies in radio and television transmitters and induction and dielectric heating equipment for industrial use.

Notes

- Ratings and Performance are based on CCS Class C Telegraphy service unless otherwise shown.
- Excluding flying leads and protruding side terminals, pipes or handles.
- Highest frequency for full input.
- For triodes, amplification factor (μ) is shown; for tetrodes, beam tubes and pentodes, transconductance (gm) in micromhos is listed.
- Watts output at 500 megahertz.
- Milliwatts output at 3000 megahertz.
- Twin unit tube, Ratings are each unit, Performance for both units.
- Parallel heater connection requires half heater voltage and twice heater current.
- For d-c and single phase a-c. For 2 phase a-c voltage per phase will be half listed value and current per phase will be listed current value.
- Listed values of filament voltage and current are per phase for 3 phase operation.
- Designed for audio and ultra-sonic service, Ratings are single tube Class AB and Performance is for 2 tubes Class AB.
- Ratings and Performance are for Class AB r-f amplifier service.
- For anode current of 1 milliamper maximum at maximum anode voltage.
- For oil immersion, cooling value is 14 kilowatts.

COOLING CODE = A — RADIATION
F — FORCED AIR
W — WATER
V — VAPOR

HIGH VACUUM RECTIFIERS

High vacuum rectifiers are two electrode tubes with heated cathodes. Electrons emitted from the cathode are attracted to the plate when it is positive with respect to the cathode. These electrons form the tube current. High vacuum rectifiers are not very efficient for rectifying large currents, since the space charge increases the tube drop, but in applications involving very high voltages at low currents or a linear characteristic they are necessary. The absence of gas provides very high insulation during the inverse half cycle. Pure tungsten or thoriated tungsten fila-

ments are used to permit short delay periods between the application of filament voltage and plate voltage. High vacuum rectifiers are used in high voltage power supplies for electrostatic precipitation of vapors and dust such as the Precipitron® and high voltage testing of materials, to absorb high voltage inverse pulses such as reflected radar pulses, to permit undirectional capacitor charging in pulse shaping networks, to produce the high accelerating voltages used in x-ray tubes and any other devices requiring small currents at very high voltages.

COLD CATHODE GAS-FILLED TUBES

Cold cathode glow tubes have two or three electrodes and an inert gas fill. One popular type of two electrode tube is the voltage regulator tube. This type maintains a constant voltage drop with varying load currents.

The KX-642 provides over-voltage protection for power lines. It shorts out surges due to switching or lightning.

The gas triodes have a starting electrode which, when excited, starts tube conduction at a lower voltage.

HOLLOW CATHODE SPECTRAL TUBES For Atomic Absorption Spectroscopy

[illegible]

Atomic Absorption Spectroscopy

One of the major uses of Westinghouse hollow cathode tubes is in the field of atomic absorption spectroscopy to measure impurity traces as small as 50 parts per billion. This analytical technique uses a hollow cathode tube as a source of monochromatic spectral lines of the cathode element or elements. Components necessary for making atomic absorption spectroscopic measurements are 1) a source (hollow cathode tube) of atomic spectra of the desired element, 2) a flame, 3) a monochromator, and 4) a detector. These components are shown in the accompanying diagram. To perform an analysis by this technique a hollow cathode tube with a cathode of the desired element, for example copper, is used as the source of excited copper atoms. The radiation from the tube is passed through a flame, a monochromator and then into a detector where a signal will be registered at the 3247 Å copper line. A solution containing copper may then be aspirated into the flame. This will cause a reduction in the signal at 3247 Å because of the absorption of some of the energy from the excited copper atoms by the unexcited copper atoms in the flame. By aspirating standard samples containing varying

amounts of copper into the flame a calibration curve may be drawn. An unknown sample may then be aspirated into the flame and the copper concentration determined directly from the calibration curve.

This description is rather simplified. More sophisticated systems and equipment have been devised and are now available commercially from several companies.

NOTES

- WINDOW CHARACTERISTICS**
P = Pyrex (70% transmission at 3050 Å)
Q = Quartz (75% transmission at 2200 Å)
A = 1½ inch diameter window
B = 1 inch diameter window
- GAS FILL**
A = Argon gas fill Ne = Neon gas fill
- CURRENT RATING**
The current rating shown is the maximum permissible figure and does not represent typical operation. For optimum performance and life, a tube should be operated at the lowest current consistent with the desired output characteristics.

LITHIUM CAUTION

Output from a Lithium cathode tube with neon fill will experience second-order interference from the Ne-3355 line. However, operation with any one of the listed Corning Glass sharp-cutoff filters will eliminate the interference and is to be preferred over the argon-filled tube.

TYPICAL POWER SUPPLY CONNECTIONS

PHOTOTUBES

Phototubes conduct electricity when light strikes the photocathode. Variations in light intensity produce variations in current conducted. Vacuum types have a linear response to light intensity whereas gas filled types are more sensitive to light changes. Photomultiplier types have internal current amplification by auxiliary electrodes called dynodes. They have, therefore, larger signal output than the gas and vacuum types. Phototubes are used in motion-picture-film sound-pickup heads, automatic headlight dimmers, light-operated door openers and burglar alarms. Industrial uses include counting, color matching, sorting, measuring, detecting products at various stages of manufacture, printing press registry and dyestuff process control.

GAS AND MERCURY VAPOR RECTIFIERS

Gas and mercury vapor rectifiers are two electrode tubes with heated cathodes filled with either a pressure of inert gas or mercury vapor. Mercury-vapor filled types are more sensitive to ambient temperature changes than types filled with inert gas.

Current conduction in an atmosphere of gas molecules causes ionization freeing ions which neutralizes the negative space charge. The removal of the space charge lowers the voltage needed to accelerate

electrons from the cathode to the anode. This lower tube drop allows higher currents to be conducted with lower losses than an equivalent vacuum tube.

Gas and vapor rectifiers are used in a variety of single and multiple tube circuits to provide operating voltages to large amplifier tubes used in radio broadcasting or industrial heating and in other applications requiring large amounts of current at high voltages.

IGNITRONS

Ignitrons are gas-discharge, pool-type cathode tubes in which current conduction is initiated for each conducting cycle by means of an electrode called an ignitor. The ignitor is a small conical refractory element projecting into the mercury. When a relatively small current is conducted through the ignitor to the mercury, ionization of some mercury molecules in this area takes place. Ignitrons are of the half-wave type and current is conducted only when the anode is positive with respect to the cathode and the ignitor is fired.

Control of the average conducted current is accomplished by phase control of the point in the input cycle at which the ignitor is fired. During the non-conducting cycle, ionization in these single-anode tubes is very low; the resulting reduction of shielding necessary to

prevent arc-backs lowers the arc voltage and permits operation at lower supply voltages. Ignitrons therefore have some of the control characteristics of thyatrons and, having a mercury-pool cathode, are capable of conducting very large currents. Water cooling of metal envelopes is used on most types to further increase current carrying capacity in a compact tube. Provision is made on some of the tube shells to connect thermostats for tube protection and water saving. Ignitrons are used in resistance welders, frequency-changer resistance welders, power rectifiers, high current switches in controlled fusion equipment, heat control devices for air-frame testing, and any circuit requiring precise control of large amounts of alternating or direct current.

NOTES

- Excluding flying leads, water pipes, and on coaxial tubes the mounting flange.
- Suffix PC indicates plastic-coated tube.
- At 2400 volts.
- These tubes use heavy duty ignitrons designed for continuous duty.
- Consult Industrial and Transmitting Tube Development Department for pulse modulator applications. The parameters listed represent a specific application only and substantial increases can be made in some areas.

NEUTRON & RADIATION DETECTION TUBES

Radiation detection tubes are electronic devices which permit the passage of electrical current between electrodes when exposed to penetrating radiation. A variation of the intensity of radiation causes a corresponding variation in current between the electrodes. The tubes are designed to respond primarily to neutrons of thermal energies. Radiation detection tubes are of three general types: B¹⁰F₃ (Boron Trifluoride) filled proportional counters, Uranium coated counters or ionization chambers, and B¹⁰ (Boron 10 isotope) coated ionization chambers. At low levels of neutron flux, the current pulses due to the incident thermal neutrons are comparatively few in number, and therefore do not provide a steady current output. For this reason, in low flux level application, highly sensitive detector tubes, either BF₃ filled or Uranium coated are used in a pulse counting type circuit. The tube output is fed into a suitable amplifier, and pulses, proportional to the number of incident thermal neutrons, are registered on a scalar or rate meter. In applications of detector tubes in pulse counting, those pulses arising due to gamma photons which frequently accompany the neutron flux are sufficiently small that they may normally be biased out by a simple discriminator circuit. Uranium coated and B¹⁰ coated ionization chambers are used in higher neutron flux levels. The tubes are self-integrating, and the output, proportional to the incident thermal neutron flux, is read directly on a d-c current indicating device. The gamma photons, frequently accompanying the neutron flux, usually constitute a very small percentage at high neutron flux levels, and as such contribute insignificantly to the signal current. In applications involving a high gamma flux, however, the compensated ionization chamber may be used. This tube electrically reduces the signal due to gamma flux. This compensation is achieved by having two concentric volumes. One of these is sensitive to neutrons and gamma flux. The other is sensitive to gamma flux only. The effective gamma sensitivity of these volumes is made equal. The output signals from the volumes are combined with opposite polarity and the signals due to gamma flux cancel each other. The effectiveness of this can-

TYPICAL NUCLEAR INSTRUMENTATION RANGES IN TERMS OF PER CENT REACTOR POWER

cellation is limited primarily by instrumentation and the reactor characteristics. In application the gamma sensitivity of this tube may thus be reduced by a factor of 100 to 1000. The lower operating limit of the compensated ion chamber is reduced still further by using a guard ring construction. With a guard ring construction, leakage currents, through the insulators due to the applied voltages, flow to ground and not through the signal circuit. Radiation detection tubes are used as laboratory instruments in atomic and nuclear radiation investigations, in the control of reactors, and in health monitoring for personnel protection.

WESTINGHOUSE PAGE 24

Vidicons are compact, light-weight camera tubes which require simple circuitry and render acceptable performance in most applications. They find wide usage in closed circuit or industrial television (ITV) systems and in film cameras for commercial

television stations. Common applications include industrial surveillance of property and process, remote or magnified observation of medical operations, military surveillance and remote signature check or record survey in financial institutions.

Display storage tubes are cathode-ray tubes with the ability to integrate successive increments of a display or repetitive weak signals to form a high-brightness image with duration sufficient to photograph or examine it. Applications range from airborne radar to transient study with sophisticated oscilloscopes.

INDUSTRIAL RECEIVING TUBES

APPLICATION CLASSES FOR INDUSTRIAL RECEIVING TUBES

Industrial Receiving tubes serve as low-level amplifiers, mixers, detectors, gating or coincidence tubes, oscillators and relay drivers in military and industrial equipment. These tubes may incorporate one or more of the following premium design features for improved reliability: 1, rugged structure, 2, performance stabilization by burn-in or seasoning, 3, maintenance of peak emission during prolonged cutoff operation, 4, more uniform characteristics, 5, long heater life with heater cycling, and 6, low internal noise.

Special Purpose Tubes are used in industrial process control, military and commercial communication and electronic computing equipment.

This group of types, although no longer used in new industrial equipment designs, is made available for maintenance because of their previous popularity. All of these types have been updated to the latest design techniques and new materials to

INDUSTRIAL RECEIVING TUBES

continued

provide better reliability than was possible when they were originally introduced.

II Premium types designed specifically for applications involving greater shock and vibration environments. Designs are built for greater mechanical strength and rated for long life and reduced spread of characteristics.

III Designed primarily for computer service where on-off control applications with long periods of cutoff operation involved.

IV Special audio output beam power tubes.

V Specifically designed for mobile communications equipment to withstand variations in supply voltage and cycling conditions.

VI Types designed particularly for the instrumentation market for long life stability and low cathode interface are prime requirements.

VII Designed especially for audio amplifiers where, hum, noise and microphonics are critical.

- Electrometer tube.
- Remote-cutoff pentode.
- Heaters in parallel connection have half the voltage and twice the current shown.

WESTINGHOUSE PAGE 27

VACUUM MEASURING TUBES

Vacuum measuring tubes are designed to become part of an evacuated system. With suitable circuitry, the pressure in that system may be accurately determined. The Bayard-Alpert ionization gauge is used for measurement of very low pressures. The Schulz-Phelps ionization gauge measures pressures up to one atmosphere. The Pirani and thermocouple gauges

are less accurate and measure only the higher pressures, but, their associated circuitry is much simpler.

These tubes are used in electron tube and semiconductor device processing control, vacuum deposition, research and rocket altimeter applications.

Notes

1. Excluding flexible leads. Length and diameter describe space to contain tube.
2. Grid outgassed by electron bombardment.
3. Grid outgassed by a-c current conduction.
4. Non-burn-out filament and grid outgassed by a-c current conduction.

MICROWAVE TUBES AND DEVICES

Microwave Tubes and Devices fall in three main categories:

Magnetrons: Magnetrons generate energy in the microwave frequencies by interaction of an electron in a combined electrostatic and magnetic field with integral resonant cavities. They are widely used in radar transmitter, microwave test, altimeter and telemetry instruments.

Reflex Klystrons: Reflex Klystrons generate low-power energy in the microwave

frequencies by electron reflection excitation of an integral resonator. They are used in radar receivers, low-power radar transmitters, telemetry, microwave communications, microwave test equipment and as parametric amplifier pumps. **Reference Cavities:** Reference cavities are fixed-frequency, temperature compensated, vacuum-sealed devices used as frequency standards in microwave transmission equipment.

Notes

1. Size of space necessary to include entire tube except flying leads.
2. Set at factory to any frequency between 8.5 and 11 GHz.
3. Fixed frequency, trimmable ± 100 MHz, center frequency between 11 and 14 GHz.
4. Fixed frequency, trimmable ± 150 MHz, center frequency between 8.5 and 11 GHz.
5. Fixed frequency, trimmable ± 100 MHz, center frequency between 8.5 and 11 GHz.

INDUSTRIAL & MILITARY CATHODE RAY TUBES

Industrial & Military Cathode Ray Tubes are structurally similar to Reference Picture Tubes. Their common characteristics include a gun which forms electrons emitted from a thermionic cathode into a cylindrical beam, suitable deflection provision for the beam to strike any area of the screen and a phosphor screen which emits light when high-velocity electrons strike it.

The Westinghouse Industrial & Military Cathode Ray Tubes represent a high degree of engineering achievement in the field of display tubes for specialized applications. High resolution guns, special phosphors and improved mechanical design are some of the distinctive features of these tubes. They are designed for service in oscilloscope, radar display, flying-spot scanner, video monitor and computer readout applications.

2. Aluminized screen, round faceplate.
3. Round faceplate.
4. Aluminized screen, round faceplate, 0.9" diameter neck, 6.3 volt — 300 mA heater.
5. Aluminized screen, rectangular faceplate.

PRICES

Prices in this MASTER should not be considered as final. INQUIRE ABOUT LATEST PRICES AND DELIVERY.

DISCOUNTS

Trade discounts apply in most cases where LIST PRICES are shown.

ORDERING

Since previous editions of the MASTER are frequently referred to, it is important, when ordering, to mention specifically the edition and page number, also the catalog number of each item. This will avoid possible confusion and delay.

INVENTORY

While most distributors maintain a large and varied stock, they do not represent that they stock all manufacturers' products shown in this MASTER catalog.

Mil-W-76B Plastic Wire**TYPE MW — UNCOVERED PLASTIC**

DESCRIPTION: Solid or extra flexible stranded tinned copper, color coded **medium wall** polyvinylchloride insulation. (Nom. wall thickness .016").

CHARACTERISTICS: Temperature rating -40°C to +80°C, Voltage rating 1000 volts. Resistant to acids, alkalis, oil, flame, moisture and fungus.

Mil-W-16878D

TYPE B — UNCOVERED PLASTIC

Pre-Bonded Tinned Copper Conductor

DESCRIPTION: Each strand of the conductor is double tinned and then heated, which bonds the individual strands together for easy stripping. Color coded .010" polyvinylchloride insulation. The insulation meets requirements of MIL-W-16878D.

CHARACTERISTICS: Temperature rating -55°C to +105°C. Voltage rating 600 volts. Resistant to acids, alkalis, oil, flame, moisture, solvents, and fungus.

APPLICATION: A pre-bonded conductor is the ideal construction when leads are to be cut and stripped for point to point wiring. The pre-bonded conductor maintains much of the flexibility of an ordinary stranded wire but reduces processing and handling costs on soldering, retwisting of strands after stripping and hand tinning operations. Since the individual strands are bonded, expensive induction heating equipment is unnecessary.

Mil-W-5086A**SHIELDED AIRCRAFT WIRE FOR ELECTRICAL SYSTEMS****NEW****NYLON JACKETED SHIELDED CABLE (MIL-C-7078A Type 2)****Base Wire MIL-W-5086A Type 1****DESCRIPTION:**

Each conductor stranded tinned copper, color coded PVC insulation clear nylon jacket on each conductor, cabled, braided tinned copper shield, 85% coverage. Clear nylon jacket overall. Per Type 1 MIL-W-5086A; per Type 2 MIL-C-7078A.

CHARACTERISTICS:

Temperature rating: -55°C. to +105°C. Voltage rating: 600 volts. Resists effects of water, oil, aircraft fuels, hydraulic fluid, skydral, ethyleneglycol, alcohol, dilute acids, alkalis, fungus and abrasion.

**NYLON JACKETED SHIELDED CABLE (MIL-C-7078A Type 2)****Base Wire MIL-W-5086A Type 2****DESCRIPTION:**

Each conductor stranded tinned copper. White PVC insulation. Color coded glass braid on each conductor. Clear nylon jacket on each conductor. Conductors cabled, braided, tinned copper, shield overall, 85% coverage. Clear nylon jacket overall per Type 2, MIL-W-5086A, Type 2, MIL-C-7078A.

CHARACTERISTICS:

Temperature rating: -55°C. to +105°C. Voltage rating: 600 volts. Resists effects of water, oil, aircraft fuels, hydraulic fluid, skydral, ethyleneglycol, alcohol, dilute acids, alkalis, fungus and abrasion.

Alpha RG Coaxial Cables

Now Alpha Wire, the industry's one total prime wire source, manufactures a complete line of coaxial cable. Through the most advanced manufacturing techniques, Alpha Wire now serves your every requirement for all types of coaxial cable.

For more than forty years Alpha Wire has maintained a world-wide reputation for prompt service. All the coaxial cable types, as well as the complete line of Alpha Wire, cable and tubing is ALWAYS IN STOCK.

CONTROL AND INSTRUMENTATION CABLE

MULTI-CONDUCTOR SHIELDED PLASTIC JACKET

PER MIL-W-16878D

CHARACTERISTICS: Temperature rating -55°C to +105°C. Resistant to acids, alkalis, oil, flame, moisture, solvents and fungus.

APPLICATIONS: Interconnecting cables for electronic equipment, instrumentation and control cable, telemetry data, remote control of sensitive recording instruments.

DESCRIPTION: Each conductor stranded tinned copper. Color coded, polyvinylchloride insulation, cabled, mylar wrap. Braided tinned copper shield 90% coverage, chrome gray polyvinylchloride jacket overall.

UNSHIELDED STATION CONTROL CABLE

HEAVY-DUTY MULTI-CONDUCTOR PLASTIC JACKET—600 VOLTS

DESCRIPTION: Each conductor, stranded bare copper, .020" polyethylene insulation, .010" polyvinylchloride jacket over each conductor, color coded, cabled with fillers where necessary, moisture resistant tape, black polyvinylchloride jacket overall, 600 volt operating voltage.

APPLICATIONS: Remote control of automatic electrical equipment, recording and relaying devices, telemetering, switchgear operations and indicators, substation operation, temperature voltage, pressure and motor control, dimensional tolerance on automatic quality control.

ALPHA electronic WIRE

SHIELDED CONTROL CABLE

HEAVY-DUTY MULTI-CONDUCTOR RUGGED NEOPRENE JACKET

DESCRIPTION: Each conductor stranded tinned copper, color coded rubber insulation, cabled with fillers where necessary, cotton wrap, braided tinned copper shield, cotton wrap, rugged black neoprene jacket overall.

CHARACTERISTICS: Operating Temperature: -20°C to +60°C.

UNSHIELDED CONTROL CABLE

HEAVY-DUTY MULTI-CONDUCTOR RUGGED NEOPRENE JACKET—600 VOLTS

DESCRIPTION: Each conductor stranded bare copper, color coded rubber insulation, cabled with fillers where necessary, wrap over conductors, heavy duty black neoprene jacket overall, 600 volt operating voltage.

APPLICATIONS: Remote control of automatic electrical equipment and sub-stations, tele-metering, voltage pressure and motor control, signal transmission. Flexible heavy duty neoprene jacketed cable, recommended for outside installation, cable resists oil, ozone, sunlight, moisture, abrasion and impact.

Telemetry & Supervisory Shielded Control Cable

DESCRIPTION: Each conductor bare solid copper, high molecular weight polyethylene insulation, color coded, twisted into pairs, cabled with a non-hygroscopic binder tape .008" aluminum shield, black polyethylene jacket overall. Operating voltage 300 volts.

Double jacketed types, (3903-4060 below) same except for additional inner black polyethylene jacket over binder, and .005" copper shield.

APPLICATIONS: Remote control of rocket recording data and test-firing control, transmission of signals which telemeter temperature, voltage pressure, etc. Control of multiple circuits, measuring devices, quality control equipment, radar antenna. For aerial, duct and conduit installations.

Double jacketed types have higher dielectric strength and suited for direct burial installations.

Shielded Control Cable

GENERAL PURPOSE MULTI-CONDUCTOR
RUBBER INSULATED AND RUBBER JACKET

DESCRIPTION:

Each conductor, stranded tinned copper, color coded rubber insulation, cabled with fillers where necessary, cotton wrap, braided tinned copper shield, cotton wrap, tough black rubber jacket overall.

CHARACTERISTICS:

Suggested Operating Temperature: -20°C to $+60^{\circ}\text{C}$.

APPLICATIONS:

Cables are extremely flexible for control circuits, video and audio interconnecting cable, broadcast and heavy duty studio use.

Flat Ribbon Cable

MULTI-CONDUCTOR — PLASTIC INSULATION
CONDUCTORS PER MIL-W-16878D, Type C

DESCRIPTION: Each conductor stranded tinned copper, color coded .016" polyvinyl-chloride insulation, conductors bonded together to form flat ribbon cable.

CHARACTERISTICS: Temperature rating -55°C to $+105^{\circ}\text{C}$. Voltage rating 1000 volts. Resistant to acids, alkalis, oil, flame, moisture, solvents, and fungus.

APPLICATIONS: Saves time, weight, and space on circuit connections, interconnecting assemblies and systems, wiring harnesses for racks, sliding drawer and drop panels. Conductors fully color coded and easily separated for neat terminations.

Shielded Microphone Cable

PLASTIC JACKET

DESCRIPTION: 1702-1706: Single conductor, stranded tinned copper, white polyethylene insulation, braided or spiral wrapped tinned copper shield, gray polyvinylchloride jacket overall.

1709-1712: Each conductor stranded tinned copper, color coded polyethylene insulation, cabled with fillers, textile wrap, braided or spiral wrapped tinned copper shield, gray polyvinylchloride jacket overall.

APPLICATIONS: 1702-1706: All high impedance microphones, lapel, ribbon, velocity, crystal contact, hi-fi interconnecting cables.

1709-1712: All low impedance microphones—carbon, condenser, dynamic.

CHARACTERISTICS: Suggested operating temperature: -20°C to $+60^{\circ}\text{C}$.

RUBBER AND NEOPRENE JACKETS

DESCRIPTION: Each conductor stranded tinned copper, color coded rubber insulation, cotton wrap, braided tinned copper shield, cotton wrap, tough black rubber or neoprene jacket overall.

APPLICATIONS: 1248-1449: All high impedance microphone, broadcast and heavy duty studio use, communication and audio systems.

1250-1450/16: All low impedance microphone, broadcast and heavy duty studio use. Can also be used for control circuits, video and audio interconnection cable, and as electronic power cables.

CHARACTERISTICS: Suggested operating temperature: -20°C to $+60^{\circ}\text{C}$.

Rubber jacketed cable suited for standard duty indoor use.

Neoprene jacketed cable suited for heavy duty outdoor use and direct burial. Will resist oil, acid, sunlight, ageing and abrasion.

Low Capacitance Shielded Microphone Cable

CELLULAR FOAM POLYETHYLENE INSULATION — PLASTIC JACKET

DESCRIPTION: Single conductor, stranded tinned copper, white foam polyethylene insulation, braided tinned copper shield, chrome gray polyvinylchloride jacket.

Two conductors, stranded tinned copper, color coded foam polyethylene insulation, 1 white and 1 black, cabled with fillers, textile wrap, braided tinned copper shield, chrome gray polyvinylchloride jacket.

CHARACTERISTICS: Suggested operating temperature: -20°C to $+60^{\circ}\text{C}$. Low loss foam polyethylene provides lower capacitance and attenuation than standard solid polyethylene microphone cables, thereby increasing the effective length of usable cable without loss of signal.

E-Z-Strip Lamp Cord

U.L. APPROVED

DESCRIPTION: Conductors parallel, stranded extra flexible bare copper, rubber or polyvinylchloride jacket overall. Slit in jacket to permit "E-Z" separation.

APPLICATIONS: For line cord on radios, lamps, electric clocks, food mixers and other small instruments and appliances.

CHARACTERISTICS: Suggested operating temperature: -20°C to $+60^{\circ}\text{C}$. Suggested operating voltage: 300 volts.

Shielded Plastic Jacketed Cable

SPIRAL WRAPPED COPPER SHIELD

DESCRIPTION: Each conductor stranded or solid tinned copper, color coded polyvinylchloride insulation, conductors twisted, spiral wrapped copper shield, gray polyvinylchloride jacket overall. **Nominal jacket thickness .020".**

CHARACTERISTICS: Use of spiral shield makes pigtail off extremely simple and fast. Excellent for production line work. Provides close to 100% shielded coverage for audio and RF frequencies. Suggested operating temperature: -20°C to $+60^{\circ}\text{C}$.

Shielded Plastic Jacketed Cable

BRAIDED COPPER SHIELD

DESCRIPTION:

Each conductor tinned copper, color coded polyvinylchloride insulation, conductors twisted, braided copper shield, gray polyvinylchloride jacket overall. Suitable for outdoor installations.

CHARACTERISTICS:

A conventional type of braided shield providing approximately 75% coverage is particularly desirable where flexibility is required. The copper shield allows ease of pigtail soldering. Shield construction provides additional cable strength. Operating temperature: -20°C to $+60^{\circ}\text{C}$. Nominal jacket thickness .020".

APPLICATIONS:

For public address and sound systems, ideal for recording studios, amateur radio transmitters, shielded power or electronic circuits, wherever an economical shielded cable is required.

Unshielded Intercom Cable

PAIRED CONDUCTORS — PLASTIC JACKET

DESCRIPTION:

Each conductor tinned copper, color coded polyvinylchloride insulation, conductors twisted into pairs, gray polyvinylchloride jacket overall. Suitable for outdoor installations.

APPLICATIONS:

Balanced intercom systems, Annunciators, Telephones, Nurses call systems, Control circuit cable, Electronic computer cable, Multiple speaker cable, Signal systems, Alarm systems.

CHARACTERISTICS:

Suggested operating temperature: -20°C to +60°C. Suggested operating voltage: 200 volts.

Unshielded Audio Cable

MULTI-CONDUCTOR — OUTER COTTON BRAID

DESCRIPTION: Each conductor stranded tinned copper, color coded polyvinylchloride insulation, conductors twisted, brown cotton braid overall.

CHARACTERISTICS: Suggested operating temperature: -40°C to $+80^{\circ}\text{C}$. Suggested operating voltage: 600 volts.

Plastic Intercom Cable

DESCRIPTION:

Each conductor stranded tinned copper, color coded polyvinylchloride insulation, braided tinned copper shield (See Chart) over one, two, or three conductors, remaining conductors unshielded and paired, chrome polyvinylchloride jacket overall.

APPLICATIONS:

General wiring from station to station where shielded conductor(s) is essential to eliminate cross talk.

1243 Recommended for unbalanced system with remote "break-in."

1243/4: Recommended for balanced systems.

1243/5: Recommended for coin operated phonographs.

1243/P: Recommended for circuits requiring complete isolation.

CHARACTERISTICS: Suggested operating temperature: -20°C to $+60^{\circ}\text{C}$. Suggested operating voltage: 350 volts.

Shielded Audio Cable

2 CONDUCTOR — NO OUTER JACKET

DESCRIPTION:

Each conductor tinned copper, color coded polyvinylchloride insulation, conductors twisted, braided tinned copper shield overall.

APPLICATIONS:

For public address and sound systems. Transmission line. Industrial paging and call systems. Recording equipment. Hospital and school sound installations. Broadcast and audio cable. Rack and panel wiring.

CHARACTERISTICS: Suggested Operating Temperature: -20°C to $+60^{\circ}\text{C}$.

Shielded Audio & Data Cable

INDIVIDUALLY SHIELDED MULTIPLE PAIRS — PLASTIC JACKET

DESCRIPTION:

Each conductor, tinned copper, color coded, high density polyethylene, conductors twisted into pairs. 22 gauge tinned copper drain wire. Mylar-supported aluminum foil shield, aluminum facing inward. Chrome Grey PVC jacket overall.

NEW

CHARACTERISTICS: Mutual conductance between conductors of a pair, 25 pf/ft. Capacitance of a single conductor to shield, 45 pf/ft.

APPLICATIONS: For audio, R.F. and pulse applications requiring superior circuit isolation.

Shielded Plastic Jacketed Cable

MYLAR SUPPORTED ALUMINUM FOIL SHIELD

DESCRIPTION:

Each conductor stranded tinned copper, color coded polyethylene insulation, conductors cabled, wrapped mylar supported aluminum foil shield, 100% coverage with drain wire laid parallel, aluminum foil facing outward to provide maximum ground, gray pvc jacket overall.

CHARACTERISTICS: Operating temperature: -20°C to $+60^{\circ}\text{C}$. Operating voltage: 400 volts. Light weight, reduces cable diameter, and provides 100% shield coverage.

Hi-Fi and Stereo Interconnecting Cable Phono Wire

DESCRIPTION

1332 and 1200: Single conductor stranded tinned copper, white polyvinylchloride insulation, fine braided tinned copper shield overall.

1201: Same as No. 1200 plus brown cotton braid over shield.

1115 and 1116: Each conductor stranded tinned copper, color coded polyvinylchloride insulation, conductors twisted.

1100-1110: Each conductor stranded tinned copper, color coded polyvinylchloride insulation, conductors twisted with an extra tight lay for flexibility. When shielded the overall shield has been specially designed for extreme limpness so as not to impede the movement of the phono arm when tracking.

CHARACTERISTICS: Suggested Operating Temperature: -55°C to $+105^{\circ}\text{C}$.

Plastic Speaker Cable Colored and Clear Insulation

DESCRIPTION:

Conductors parallel, stranded bare copper, color coded polyvinylchloride insulation, conductors separate easily when slit apart.

APPLICATION:

Hi-Fi speaker cable, miniature juke box speaker connection and rear auto speaker extension cable. Clear insulation will blend with interior room decor.

CHARACTERISTICS:

Suggested Operating Temperature: -20°C to $+60^{\circ}\text{C}$. Operating Voltage: 300 Volts.

SERVICE & POWER CORDS

U.L. APPROVED

DESCRIPTION: RUBBER PORTABLE CORDS, TYPE SV, SJ, & S
Each conductor stranded bare copper, separator, color coded rubber insulation, cabled with fillers, separator, tough black rubber jacket overall.

NEOPRENE PORTABLE CORDS, TYPE SVO, SJO, & SO

Each conductor stranded bare copper, separator, color coded, rubber insulation cabled with fillers, separator, black neoprene jacket overall. Oil, grease, ozone, acid, moisture resistant.

YELLOW PORTABLE CORDS, TYPE SVTO, SJTO, & STO

Each conductor, stranded bare copper, oil resistant polyvinylchloride insulation, cabled with fillers, separator, plastic jacket overall. Resistant to oil, acid, moisture, abrasion resistant, easy to clean.

CHARACTERISTICS

& APPLICATIONS: Suggested Operating Temperatures: -20°C to +60°C.

RETRACTILE COIL CORDS

POWER CORDS—NEOPRENE JACKET U.L. APPROVED

RETRACTED LENGTHS 2 & 4 FEET—EXTENDED LENGTHS 12 & 25 FEET

DESCRIPTION: Long-lasting service is assured with this quality multi-conductor power cord. Each conductor is stranded copper, with rubber installation, and a rugged weather and oil resistant neoprene jacket overall.

APPLICATION: Used on electric tools, portable drills, soldering wires, electrical appliances, household appliances, etc., to eliminate loose hanging wires and to prevent wires from tangling and twisting.

CHARACTERISTICS: Suggested operating temperature: 20°C to +60°C.

*If all four conductors normally carry current, amp rating is as shown. If one lead is used as a ground, amp rating is the same as 2 and 3 conductor cords.

†A 12" retracted length with a 12" straight lead on each end for easy stripping and termination. Cord as shown is approximately 6 feet.

RETRACTILE TEST LEAD WIRE

RETRACTED LENGTH 12"—EXTENDED LENGTH 6 FEET

DESCRIPTION: A high grade quality rubber insulation for maximum flex life extruded over a single conductor of extra flexible tinned copper which gives long life to this retractile test lead wire. Available in a 12" retracted length with a 6" straight lead on each end, the cord extends to approximately 6 feet.

RETRACTILE POWER CORD SETS U.L. APPROVED

RETRACTED LENGTH 18"—EXTENDED LENGTH 7½ FEET

DESCRIPTION: Coiled power cord with a sturdy molded male plug on one end. On the other end we have removed a portion of the neoprene jacket, exposed the conductors and stripped them for easy termination. Operation voltage, 300 volts.

APPLICATION: Same as power cords, but with a plug on one end.

RETRACTILE COIL CORDS

RETRACTILE COMMUNICATION COIL CORDS

RETRACTED LENGTHS 2 & 4 FEET—EXTENDED LENGTHS 12 & 25 FEET

DESCRIPTION: Multi-conductor communication cord manufactured with extra flexible #23 AWG/21/36 tinned soft cadmium copper for maximum flex life. Insulated with rubber for communication circuits of maximum 120 working volts. The overall jacket is a specially compounded cured neoprene jacket giving long life to the retractile cord.

APPLICATION: Used in communication equipment, such as telephone car carriers, mobile radio equipment, ham operations, head sets, citizen band units and radio transmitter to receiver head sets, communication cords eliminate hazards and inconveniences caused by tangled straight cords.

RETRACTILE COMMUNICATION CORDS (SHIELDED)

RETRACTED LENGTHS 2 & 4 FEET—EXTENDED LENGTHS 12 & 25 FEET

DESCRIPTION: Same as above, except that shielded conductors are individually shielded with a cadmium copper shield to eliminate external electrical interference. Shield can be pigtailed for direct soldering connections.

APPLICATION: When shielded communication cords are needed.

MINIATURE RETRACTILE COMMUNICATIONS CORDS

RETRACTED LENGTH 2 FEET—EXTENDED LENGTH 10 FEET

DESCRIPTION: A small diameter plastic cord with stranded tinned copper conductors for maximum flexibility, insulated and jacketed with polyvinylchloride. Each cord is available in a 2 ft. retracted length with a 5' straight lead on each end and extends to approximately 10 feet.

APPLICATION: For low voltage power and communication equipment where miniaturization is required due to space and weight limitations.

Oval Commercial Braid

DESCRIPTION: A woven tinned copper braid which is left in the tubular configuration as it leaves the braiding equipment. It is manufactured to a specific inside diameter but because of its extreme flexibility cannot maintain its completely round shape and becomes oval.

Tinned Copper Tubular Braid To MIL Spec QQ-B-575

DESCRIPTION: A woven tinned copper braid which is manufactured completely round as outlined in Mil Spec QQ-B-575. Each strand of the braid is soft drawn tinned copper wire. The braid is self-supporting and maintains its round configuration. The percentage of shielding coverage is 95% or more when placed over a mandrel of an equivalent diameter to the inside braid diameter.

High Voltage Wire

DESCRIPTION: Single conductor, stranded tinned copper, white flame retardant polyethylene insulation. When shielded, braided tinned copper shield overall.

APPLICATIONS: Designed for use as high-voltage leads in electronic equipment, especially for cathode ray tubes in television receivers and oscilloscopes. Shielded type used to minimize RF radiation in transmitters, X-ray, and diathermy equipment.

APPLICATIONS Recommended especially for ship, short-wave and transmitter antennas where 1159-1164: high tensile strength and corrosion resistance is required.

APPLICATIONS For short wave and transmitter antennas. Suitable for commercial and 136 and 112: amateur use. Easy to install, no "backlash."

CATV Foam 75 OHM Triaxial Feeder Cable

DOUBLE SHIELD — DOUBLE JACKET — FOAM RG 11/U TYPE

This cable has been specially designed for use as a secondary distribution lead-in cable for community antenna television systems.

The double shield construction provides maximum attenuation of radiated signals and allows for a minimum of cross-cable interference and pickup.

Cable construction consists of a solid bare copper conductor, foamed polyethylene dielectric, braided copper shield, covered by an inner polyethylene jacket, and a second braided copper shield with a polyethylene jacket overall.

The outer jacket offers high resistance to sunlight, weathering, and resists attack by acid, alkalis, oil, and grease.

Alpha No.	9602F
Nominal Impedance	75 ohm

CATV Foam 75 OHM Coaxial Feeder Cable

SINGLE SHIELD — SINGLE JACKET — FOAM RG 11/U TYPE

A high quality foam core feeder cable with non-peaking attenuation characteristics. This foam core cable is widely used as secondary distribution lead-in cable. Cable has a solid bare copper conductor, foam polyethylene dielectric, braided copper shield with a weather proof polyethylene jacket overall. A tough, long lasting cable that is relatively light weight, flexible and easy to install.

Alpha No.	9603F
Nominal Impedance	75 ohm
Conductor	Solid Copper

CATV Foam 75 OHM Drop Cable

FOAM RG 59/U TYPE — WITH AND WITHOUT MESSENGER

A low-loss, light weight cable with wide use as subscriber tap-off lead-in cable. Cable contains a bare copper conductor, foam polyethylene dielectric, braided copper shield with a black polyethylene jacket overall. Jacket withstands effect of weathering and sunlight and is resistant to attack by acid, alkali, oil, and grease.

Alpha No. 9606M has, in addition, a built-in #14 gauge steel wire messenger in a "figure eight" construction.

Alpha No. 9606M — Same as 9606F with steel messenger wire

75 OHM Foam TV and FM Coaxial Cable

FOAM RG 59/U TYPE LOW LOSS—MAXIMUM SIGNAL STRENGTH

Foam core coaxial cable delivers maximum low-loss performance for any TV or FM antenna system. This cable, while providing superior signal for black and white TV, is especially recommended for color TV installations.

Coaxial cable maintains a constant impedance match, eliminates ghosts and color smears, will not pick up interference and gives optimum signal in all types of weather.

The cable contains a solid bare copper conductor, foam polyethylene insulation, braided copper shield and a heavy duty black polyethylene jacket.

(All dimensions are nominal)

75 OHM Solid Core TV and FM Coaxial Cable

RG 59/U TYPE

MAXIMUM SIGNAL STRENGTH — EXTENDED OPERATING LIFE

Coaxial cable is recommended by many leading antenna manufacturers for optimum black and white and color reception. Ghosts, color smears, and noise are eliminated by use of coaxial cable and effective operating life is many times that of ordinary flat line wire. Many TV sets and antennas are now manufactured for use with 75 ohm cable and inexpensive matching transformers may be used in older sets designed for 300 ohm line.

Construction consists of a copper coated steel conductor, polyethylene dielectric, braided copper shield and a grey or black PVC jacket overall.

50 OHM Amateur Radio and CB Coaxial Cables

FOAM RG 8/U TYPE — SOLID RG 58/U TYPE

Signal loss between transmitter and antenna is minimized by the use of these specially designed coaxial cable types. In addition, the ability of these cables to shield out stray radiation fields makes them the preferred broadcast transmission cables.

Foam core cable consists of a stranded bare copper conductor, foam polyethylene dielectric, braided copper shield, and a black PVC jacket.

The solid core cable contains a solid bare copper conductor, solid polyethylene dielectric braided copper shield with a black PVC jacket overall.

Jackets resist effects of weathering and sunlight and heavy abrasion.

ALPHLEX® ZIPPER TUBING

DESCRIPTION Alphlex Zipper Tubing is the all purpose modern way to harness, cover and protect cables. Just zip to close — and zip to reopen. If you wish, it may be permanently sealed with PB-200 Special Compound Liquid Sealer. Alphlex Zipper Tubing is strong, flexible, durable, and offers new freedom in design, production and repair.

APPLICATIONS To shield, to harness wire, to custom-cable to any length, to enclose, to encase, to identify (such as cable markers), to protect, to replace worn jackets.

TYPES OF ZIPPER TUBING

Alphlex® Polyvinylchloride Plastic Tubing (PVC-105)

CONFORMS TO MIL-I-631D †

DESCRIPTION: The superior mechanical, thermal, and electrical properties of Alphlex PVC-105, coupled with its economical cost have led to an ever increasing use of this all-purpose insulating material. Another major advantage of Alphlex PVC-105 is its high degree of flexibility, which is maintained even under severe environmental conditions.

Rated for temperatures as high as 105°C, PVC-105 has a high dielectric strength that remains unaffected by increasing temperature throughout its range. PVC-105 maintains a high resistance to the agents of heat, oil, chemical corrosion and fungi with no loss in tensile strength, or flexibility. Other features include an exceptional resistance to abrasion and indefinite shelf life.

Alphlex PVC-105 is compounded with first quality, non-migratory resinous type plasticizers. Carefully selected stabilizers and modifiers added in the manufacturing process, counteract chemical and environmental degradation. Under adverse conditions Alphlex PVC-105 retains its flexibility which permits it to cling to and protect irregular shapes. An unusually simple to handle insulating material, PVC-105 "snakes" well under all environmental conditions.

APPLICATIONS: Designed and manufactured for general electronic, aircraft and electrical applications involving temperatures as high as 105°C. Especially useful to protect wires and cables subject to abrasion or where a flexible tubing with a high degree of resistivity to oil, chemicals or solvents is necessary.

Alphlex® Teflon Extruded Tubing

CONFORMS TO MIL-I-22129B

DESCRIPTION: Alphlex Teflon Tubing is unmatched by any other type of tubing for use in electrical applications at high frequencies and temperatures. Teflon is rated for continuous operation at 250°C, and retains an exceptional toughness and its flexibility throughout its temperature range.

Alphlex Teflon Tubing has the further advantage of a high degree of resistance to flexural fatigue and repetitive stresses; coefficient of friction lower than that of any other known solid; and a dielectric constant and power factor lower than that of any other known solid. This tubing will not crack or become brittle during aging.

Because of its resistance to soldering iron temperature, Alphlex Teflon Tubing will not shrink back during the soldering process. Alphlex Teflon Tubing will not melt and flow as do conventional thermoplastic materials. At high frequencies, its dielectric strength is many times that of other insulating materials.

Alphlex Teflon Tubing is chemically inert, has zero moisture absorption and its insulation resistance properties are unaffected by heat aging or temperature use up to 250°C.

APPLICATIONS: A thin flexible insulation, Alphlex Teflon Tubing permits a miniaturization and compactness of design never before possible. Invaluable in any application where a high heat resistant, flexible, non-flammable, chemical solvent and corrosion-resistant material is required.

NEW

Irradiated Polyolefin Tubing

NEW ALL-PURPOSE SHRINKABLE TUBING — FIT-221

- SHRINKS 50% (2:1 RATIO) WITH ONLY 5% LONGITUDINAL SHRINKAGE
- FEWER SIZES COVERING MORE APPLICATIONS

DESCRIPTION: Alphlex FIT-221 Shrinkable Tubing, when heated, forms a tight-mechanical bond, even over irregularly shaped materials. FIT-221 is available in a range of colors and in clear.

FIT-221 is an all-purpose polyolefin extruded tubing that is simple to use and provides a tight mechanical bond. FIT-221 is an irradiated, thermally stable, modified polyolefin base product. FIT-221 Clear may be used so that jacketed, printed components or cable data is clearly visible and inspection of insulated components, cables or terminations is simplified.

The tubing is supplied in an expanded form and easily slips over the object to be covered. When a temperature of approximately 275°F (135°C) is applied, it immediately returns to its predetermined size (approximately one-half smaller) and forms a permanent tight-fitting mechanical bond. FIT-221 Tubing will not cold-flow or melt but retains form stability

throughout its temperature range. No radioactivity exists in or on the material and it will not emit radiation. Longitudinal shrinkage is 5% maximum when completely recovered.

Controlled shrinkage to the correct predetermined size takes place within seven seconds at 225°F to 255°F. Shrinkage will begin at 235°F, but at a somewhat slower rate. When using an oven, temperature may range from 235°F to 300°F. Prolonged exposure to these temperatures will not affect the physical or electrical properties of FIT-221 Shrinkable Tubing. FIT-221 Clear Tubing remains transparent over its entire operating range of -55°C to 135°C.

FLAMMABILITY: Although FIT-221 Clear is a high temperature material, it is flammable and will burn. However, when the tubing is shrunk over non-flammable or flame-resistant components, such as connectors, terminals and wire, the entire assembly will not support combustion.

All  Types of FIT Tubing are available from stock and may be cut and/or marked to your specifications.

Irradiated Polyolefin Semi-Rigid Tubing FIT-295

All Types of FIT Tubing are available from stock and may be cut and/or marked to your specifications.

FOR MAXIMUM STRENGTH AT ALL STRESS POINTS

SHRINKAGE RATIO 2:1 (50% Shrinkage)

DESCRIPTION: Alphlex FIT-295 Shrinkable Tubing is designed to provide maximum mechanical strength at stress or connection points. An extremely strong, heavy wall, abrasion-resistant, extruded tubing FIT-295 is supplied in expanded form and easily slips over the object to be covered.

When a temperature of approximately 275°F (135°C) is applied, Alphlex FIT-295 immediately returns to its predetermined size (approximately 1/2 smaller) and forms a permanent tight-fitting mechanical bond. FIT-295 will not cold-flow or melt but retains form stability throughout its temperature range. No radioactivity exists in or on the material and it will not emit radi-

ation. Longitudinal shrinkage is less than 5% when completely recovered.

Controlled shrinkage to the correct predetermined size takes place within seven seconds at 275°F to 300°F. When using an oven, temperature may range from 235°F to 300°F. Prolonged exposure to these temperatures will not affect the physical or electrical properties of FIT-295 Tubing.

FLAMMABILITY: Although FIT-295, Clear, is a high temperature material, it is flammable and will burn. However, when the tubing is shrunk over non-flammable or flame-resistant components, such as connectors, terminals and wires, the entire assembly will not support combustion.

Irradiated Polyvinylchloride Tubing FIT-105

All Types of FIT Tubing
are available from stock and may be
cut and/or marked to your specifications.

HIGHLY FLEXIBLE — IDEAL FOR CABLE JACKETING

Conforms to MIL-1-631D, Type F, Form U, Grade C, Class 1, Cat. 1

SHRINKAGE RATIO 2:1 (50% Shrinkage)

DESCRIPTION: Alphlex FIT-105 is an easy-to-use modified polyvinylchloride that provides a snug, extremely flexible insulation.

Because of its flexibility, strength and its ability to shrink 50% on application of heat, FIT-105 is ideally suited for insulating components and cables with a wide variation in shape and diameter.

Because of the 50% expanded diameter of FIT-105 Tubing, it is an extremely useful cable jacketing material. Cable cores may be pulled through FIT-105 Tubing with comparative ease and shrunk down to form a jacket with all the qualities of the finest extruded plastic jackets.

The tubing is supplied in expanded form and in continuous lengths. When a temperature of approximately 347°F (175°C) is applied, Alphlex FIT-105 Tubing immediately returns to its predetermined size (approximately 50% smaller), and forms a permanent, tight-fitting mechanical bond. FIT-105 Tubing will not cold-flow or melt but retains form stability within its temperature range. No radioactivity exists in or on the material and it will not emit radiation. Longitudinal shrinkage is less than 10%.

Controlled shrinkage to the correct predetermined size takes place within seven seconds at 325°F, or above. When using an oven, temperature may range from 325°F to 350°F.

Irradiated Kynar[®] Tubing

FIT-350

HIGH TEMPERATURE TUBING

A tough, thin wall tubing with outstanding cut-through and abrasion resistance. Semi-rigid polyvinylidene fluoride.

10 sizes cover complete range of .032 — 1 inch

Clear and non-flammable

SHRINKAGE RATIO 2:1 (50% Shrinkage)

DESCRIPTION: Alphalex FIT-350 is a new shrinkable tubing with outstanding temperature and physical characteristics and high dielectric strength. Longitudinal shrinkage is only 5%.

FIT-350 is an extremely tough extruded tubing that can be repeatedly flexed, bent, or twisted without loss of its mechanical or electrical strength. Supplied as a clear tubing, FIT-350 may be used where inspection or identification of the item covered is necessary.

When a temperature of approximately 347°F. (175°C.) is applied, the tubing immediately returns to its predetermined size (approximately one-half smaller) and forms a permanent, tough mechanical bond.

FIT-350 will never cold flow or melt and will not split when shrunk over sharp or irregularly shaped objects.

FIT-350 is non-flammable and will operate continuously at temperatures from -55°C to +175°C. It will withstand intermittent heat shock at temperatures up to 350°C.

Compared with other fluorocarbon tubing types, FIT-350 has markedly superior abrasion, cut-through, and cold flow properties.

SHRINKING METHODS: The use of a hot air gun (Alpha HG-1) is recommended as being generally the easiest heating method. However, excellent results may be achieved by the use of an oven, radiant heat, dipping in hot liquids, or heating with a soldering iron, burner, or even the flame of a match.

NEW

All FIT-350 Tubing available from stock and may be cut and/or marked to your specifications.

* New Item ‡ New Put-Up † Specify Color (Obs) Obsolete

ALL SPOOLS ARE ONE PIECE EXACT LENGTH, (EXCEPT SPOOLS WITH (*) FOOTNOTE)

* Spools may contain more than one piece, minimum length of any one piece is 25 ft.

When priced per M ft. length may vary $\pm 10\%$ from length shown; all other lengths are exact.

‡ Cut to Customer's Specified Length subject to available stock lengths—minimum length 25', 25' to 199', plus 25', minus 0', 200' or over, plus 50', minus 0'.

S (Teflon Hook-up Wire) Prices apply to any striped color combination in quantities of 1000' or more. Minimum order 1000' per stripe color combination on 500' and 1000' spools only. Stripping adders do not apply to braided tracers—Write for prices on non-stock tracer colors.

† (Vinyl Hook-up Wire) Prices apply to standard stock colors as listed in our current catalog and to non-stock striped colors over stock solid colors in quantities of 10,000' or more. Non-stock striped colors over stock solid colors in quantities of 1000' to 9999', add pro-rata set-up charge of \$4.50 per color combination. Minimum order 1000' per special stripe combination. Special stripe colors in any quantity will be subject to 2 piece put-up and plus or minus 10% per spool.

Prices Subject to Change Without Notice

#22 tinned copper, vinyl insulated, cabled in pairs, each pair and its ground wire under Beldfoil aluminum-Mylar shield, over-all chrome vinyl jacket. 300 Volts suggested working voltage.

Insulation resistance between shields 100 megohms/M'
 Capacitance between adjacent shields 115 mmf/ft
 Voltage breakdown between adjacent shields 1500 volts
 Working voltage between adjacent shields 50 volts

BELDFOIL®

Vinyl insulation is used for ease of stripping and soldering. Recommended for audio frequency applications requiring excellent circuit isolation. Maximum operating temperature 80°C.

MULTIPLE PAIR INDIVIDUALLY SHIELDED AUDIO AND DATA CABLES

Belden

unshielded paired sound cables

MULTIPLE PAIR UNSHIELDED SOUND CABLES

TYPICAL APPLICATIONS: Balanced line sound systems.

Made with 80 C vinyl plastic compounds for high dielectric strength and the best physical properties, such as free stripping, small

diameter, and tear resistance. It also resists the effects of water, sun, oil, grease, and ozone. The conductors are paired with a short-lay twist for conductor balance, providing a quiet circuit, free from cross talk.

RUBBER—PLASTIC—NEOPRENE

PLASTIC CABLES RECOMMENDED FOR: Lower capacitance, lower loss, greater ozone and oil resistance, lighter weight, smaller diameter.
 RUBBER CABLES RECOMMENDED FOR: Greater abrasion and impact resistance, and extra limpness so cable will lie flat on stage or studio floor.
 NEOPRENE CABLES RECOMMENDED FOR: Outside use, cold weather applications. Resistant to effects of sun, oil, and ozone.

*Capacitance between conductors.

**Capacitance between 1 conductor and remaining conductors (if any) connected to shield.

retractile (coiled) cables and cords

NEOPRENE RETRACTILE (COILED) MICROPHONE CABLES

Description	Trade Number	No. of Cond.	AWG & (Stranding)	Insulation Thickness (Inch)	Jacket Thickness (Inch)	Nom. O.D. (Inch)	Nom. Coil O.D. (Inch)	Percent Shield Coverage	Cap. (mmf/cord)	Retracted Length	Practical Extended Length	Standard Put-Up
	8409	4 unshielded	28 (7x36)	.005	.050	.165	¾	No shield	—	12"	6'	1
	Tinned copper, nylon insulated, neoprene jacket.											
	8415	4 unshielded	23 (21x36)	.020	.055	.250	¾	No shield	—	11 ½"	6'	1, 50
	8499	1 shielded	24 (45x40)	.019	.043	.160	1 ½	80	285	7 ½"	4'	1
	8497	³ 1 shielded 2 unshielded	23 (21x36)	.020	.046	.250	¾	100	480	11 ½"	6'	1, 50
	8491	⁴ 2 individually shielded 2 unshielded	23 (21x36)	.020	.050	.300	1 ½	100	480	12"	6'	1
	NEW 8490	5 unshielded	23 (21x36)	.020	.045	.265	¾	No shield	—	11 ½"	6'	1

Tinned cadmium bronze, rubber insulated, paper tape wrap, black neoprene jacket. 8499 has a spiral tinned copper shield. 8497 and 8491 have a double BELDFOIL[®] tape shield with a (21x36) tinned cadmium bronze drain wire for each shield conductor.

NEOPRENE RETRACTILE (COILED) POWER CONTROL CABLES

Longer lengths are available on request.

Trade Number	No. of Cond.	UL Type	AWG & (Stranding)	Insulation Thickness (Inch)	Jacket Thickness (Inch)	Nom. O.D. (Inch)	Nom. Coil O.D. (Inch)	Retracted Length	Practical Extended Length	Standard Put-Up
8601	2	SVO	18 (41x34)	.016	.045	.270	1	12"	6'	1
8602	3	SJO	18 (41x34)	.031	.045	.360	1¾"	12"	6'	1
8603	3	SJO	16 (65x34)	.031	.045	.370	1½"	12"	6'	1
8604	3	SJO	16 (65x34)	.031	.045	.370	1½"	22"	12'	1

Bare copper, paper wrap, rubber insulation, cabled with fillers, paper tape wrap, black neoprene jacket. 6" straight portion each end. Jacket removed 1½" each end.

VINYL RETRACTILE (COILED) TELEPHONE CORDS

Description	Trade Number	No. of Cond.	AWG & (Stranding)	Insulation Thickness (Inch)	Jacket Thickness (Inch)	Nom. O.D. (Inch)	Nom. Coil O.D. (Inch)	Retracted Length	Practical Extended Length	Standard Put-Up
	8495	3	23 (21x36)	.020	.041	.220	¾"	10"	4½'	1
	8494	4	23 (21x36)	.020	.043	.245	¾"	10"	4½'	1

Bare cadmium bronze, vinyl insulated, cabled, paper wrapped, black vinyl jacket. 8494 one end stripped 7¾", spade terminals attached and hook strain relief clamped over jacket. Other end stripped 6¼" and spade terminals attached. 8495 one end stripped 2¾", spade terminals attached and hook strain relief clamped over jacket. Other end stripped 3¾" and spade terminals attached.

Color coding of individual conductors for cables on this page and microphone cables on page 10: (1) White, (2) Black, (3) Red, (4) Green, (5) Blue, (6) Brown, (7) Yellow, (8) Orange.

All breakdown voltages and suggested working voltages are AC RMS values.

Belden

tv camera cable and 75 ohm video cables

TV CAMERA CABLES

Belden TV Broadcasting and closed circuit TV Camera Cables are precision engineered to assure reliable performance and long service life. In addition to lighter weight, greater flexibility, and easier termination

these cables are designed to maintain high conductor insulation resistance regardless of changes in ambient temperatures.

Trade number 8283

Designed to meet the critical electrical and physical requirements necessary for color television broadcast applications.

Trade Number 8280

A smaller, lighter weight cable designed to make long runs easier. For black and white (Monochrome) systems.

Trade Number NEW 8286

A 75 ohm cable designed to remain flexible in cold weather. Recommended for transistorized TV cameras.

Trade Number 8284

Designed specifically for color TV transmission. This cable incorporates circuit isolation assuring the reduction in AC hum level and cross talk essential for color TV broadcasting.

Trade Number 8282

Especially engineered for TV Eye Cameras. Recommended for remote control, monitor and cue line applications.

82 Conductor TV Color Camera Cable

4-14 AWG (19x27) tinned copper, vinyl plastic insulated, color coded.
3-16 AWG (26x30) tinned copper, vinyl plastic insulated, color coded.
BELDFOIL aluminum-Mylar wrapped shield around the above 7 conductors cabled with stranded tinned copper drain wire.
8 coaxial cables. Nom. impedance 53.5 ohms, color coded.

67-22 AWG (7x30) tinned copper, vinyl plastic insulated, color coded, 7 under conductive textile shield with stranded ground wire.
Tinned copper braid shield.
Chrome vinyl plastic jacket. 1.22" Nom. O.D.
§Cut to customer's specified length. Maximum length 1000'.

28 Conductor TV Camera Cable

4-18 AWG (16x30) tinned copper, vinyl insulated, color coded.
21-22 AWG (7x30) tinned copper, vinyl insulated, cabled in 3 groups of 7, color coded.

3 coaxial cables. Nom. impedance 51 ohms, color coded.
Tinned copper braid shield.
Chrome vinyl plastic jacket. .750" Nom. O.D.
§Cut to customer's specified length. Maximum length 1500'.

NEW 28 Conductor Hypalon & TV Camera Cable

4-18 AWG (16x30) tinned copper, vinyl insulated, color coded.
BELDFOIL aluminum-Mylar wrapped shield around 4 conductors with stranded drain wire, Mylar tape over this shielded group.
21-22 AWG (7x30) tinned copper, vinyl insulated, cabled in 3 groups of 7, color coded, one group of 7 has a BELDFOIL aluminum-Mylar

wrapped shield overall with a stranded drain wire, Mylar tape over this shielded group.
3 coaxial cables. Nom. impedance 75 ohms.
Tinned copper braid shield.
Black Hypalon jacket. .730" O.D.
§Cut to customer's specified length. Maximum length 1000'.

24 Conductor TV Camera Cable

17-22 AWG (7x30) tinned copper, vinyl insulated, color coded.
3 under BELDFOIL shield with stranded drain wire.
4-16 AWG (26x30) tinned copper, vinyl insulated, color coded.
3 coaxial cables. Nom. impedance

53.5 ohms, color coded.
Tinned copper braid shield.
Heavy cotton braid.
Chrome vinyl plastic jacket. .800" Nom. O.D.
§Cut to customer's specified length. Maximum length 1000'.

13 Conductor TV Eye Cable

9-22 AWG (7x30) tinned copper, vinyl insulated, color coded.
2-18 AWG (16x30) tinned stranded copper conductor vinyl insulated. Black and Red.
1-RG-58A/U cable 50-ohm coax.

1-72-ohm coax, stranded conductor, Mylar tape wrapped.
Chrome vinyl jacket. .470" Nom. O.D.
§Cut to customer's specified length. Maximum length 2000'.

This series of cables is also recommended as interconnecting cables in complex electronic applications. Each cable contains coaxial cables for §Minimum length 25'. 25' to 199', plus 25', minus 0. 200' or over, plus 50, minus 0. & Dupont Trademark

RF and Video signals, pulse voltages or high voltage lines as well as many conductor groups for control and power circuits.

75 OHM PRECISION VIDEO CABLE

TYPICAL APPLICATIONS: Video signal transmission in Color and Monochrome TV studios. Provides high quality carrier of video signal with superior picture definition and eliminates problems of periodicity. Cable

is manufactured with rigid control of concentricity and all dimensional tolerances. The black polyethylene jacket is manufactured with a non-contaminating, non-migratory compound. 100% SWEEP TESTED.

Description	Trade Number	AWG & (Stranding) Material	Nom. O.D. (Inch)	Percent Shield Coverage	Nom. Impedance (Ohms)	Nom. Velocity of Propagation	Nom. Cap (mmf/ft)	Nom. Attenuation per 100' kc or mc db	Standard Spool Lengths in ft
	8281	20 (Solid) copper	.304	96.4	75	66%	21.	10 KC .06 100 KC .08 1 MC .25 10 MC .78 100 MC 2.70	500, 1000
Conductor, polyethylene insulated, tinned copper double braid shield, black polyethylene jacket.									
	8279	23 (7x31) Tinned compacted conductor	.220	96	75	66%	21.	10 KC .14 100 KC .15 1 MC .35 10 MC 1.30 100 MC 4.90	100, 250 500
Miniature									

Compacted conductor, polyethylene insulated, tinned copper braid shield, black polyethylene jacket. Fits RG 59/U connectors.
Compacted conductor combines impedance uniformity of solid conductor and "nick-resistance" of stranded conductor.

For Use on 8281 Only

8299 Adapter for use with PL-259 connector. 25 in a box.

TWIN LEAD WIRES

Description & Trade Number	AWG & (Stranding)	Color	Nom. O.D. (Inch)	Nom. Velocity of Propagation	Nom. Capacitance (mmf/ft)	Nom. Attenuation per 100		Standard Package Lengths in ft
Permohm* 8285 	22 (7x30)	Brown	.255	73.3%	5.3	100	1.4	50, 75, 100 coils in counter dispenser 250, 500 coils 1000 spool
			x			300	2.8	
			.468			500	3.8	
			700			4.8		
			900			5.6		
PERMOHM Encapsulated twin lead for strong, clear signals on all channels despite salt spray industrial contamination, rain, ice and fringe area reception. An excellent color, UHF or VHF cable. First choice for all weather, all channel T.V. reception								
Celluline** 8275 	20 (7x28)	Brown	.300	80%	4.6	100	1.05	50, 75, 100 coils in counter dispenser 250, 500 1000 spools
			x			200	1.64	
			.400			300	2.12	
			400			2.5		
			500			2.98		
700	3.62							
900	4.3							
CELLULINE Maintains uniform electrical characteristics by eliminating all possible moisture between conductors. Installation is easier as no end-sealing is necessary. Losses are lower because of its lower dielectric constant (1.5). The thick outer wall of brown polyethylene protects the cable from abrasion and sun damage, and the round shape offers less wind resistance. The result is a longer lasting, more efficient line which helps maintain a strong UHF or VHF reception for black and white or color.								
8235 	18 (7x26)	Brown	.185	77%	5.0	100	.85	100 coil 500 spool
			x			200	1.35	
			.520			300	1.80	
			400			2.20		
			500			2.60		
Amateur transmitting and receiving twin lead—1KW(RF) rated.								
Weldohm†† 8230 	20 (7x28)	Brown	.072	80%	4.4	100	1.1	25, 50, 75, 100 pancake coils in a sleeve 250, 500 1000 spools
			x			200	1.7	
			.400			300	2.2	
			400			2.7		
			500			3.1		
700	3.7							
900	4.5							
WELDOHM This cable is 1½ times STRONGER and has 2½ times more FLEX LIFE than equivalent twin lead with all copper conductors, without changing the RF electrical characteristics. Tests prove its superior resistance to the pulling, whipping, and twisting that is so important to a long lasting installation.								
8225 	20 (7x28)	Brown	.058	80%	4.4	100	1.1	25, 50, 75, 100 pancake coils in a sleeve 250, 500 1000 spools

SHIELDED 100 OHM TRANSMISSION LINE

Description	Trade Number	AWG & (Stranding)	Nom. O.D. (Inch)	Nom. Velocity of Propagation	Percent Shield Coverage	Nom. Capacitance (mmf ft)	Nom. Attenuation per 100'		Standard Spool Lengths in ft
	8227	20 (7x28)	.325	62%	83	15.5	100	4.1	500
							200	6.4	
							300	8.4	
							400	10.2	

One conductor tinned, one bare copper, polyethylene insulated, cabled, polyethylene jacket, tinned copper braid shield, black vinyl jacket.

This shielded transmission line offers low-loss signal transmission which remains unaffected by outside signals or noise fields. Recommended for RF applications requiring a cross-talk free, balanced operation.

REQUEST QUOTATIONS ON PRODUCTION QUANTITIES OF RG/U CABLES NOT LISTED.

RG/U COAXIAL CABLES

Belden's RG/U cables are manufactured and laboratory tested in accordance with existing military specifications. These cables combine low capacitance and low attenuation. The virgin polyethylene insulation assures constant electrical characteristics regardless of changes in frequency or temperature.

A variety of available jacket types include abrasion resistant polyethylene, polyvinylchloride (recommended for chemical and weather resistance) and a special non-contaminating vinyl compounded for applications above 3000 megacycles.

Typical applications: Flexible test leads, patch cords and high voltage leads (consult applicable Mil Spec for dielectric rating of individual RG/U types). Excellent for audio applications.

Note: Maximum temperature rating of polyethylene is 80°C (176°F). The polyethylene insulation begins to soften above this temperature.

SWEEP TESTING

For satisfactory transmission of a signal through a cable at any frequency, Belden Sweep Tests every length of its Community TV Cables at all channels in the VHF Frequency range on an oscilloscope.

Sweep Testing, performed by trained technicians using the most modern equipment, prevents unsatisfactory program reception due to

imperfections in the cable acting as "Filter Traps" at some frequencies.

The black polyethylene jackets on Belden numbers 8211, 8212, 8213, 8215, 8232, and 8233 are manufactured with a noncontaminating, nonmigratory compound specially formulated for superior weather resistance.

HIGH VOLTAGE CATHODE-RAY TUBE LEAD

magnet wire — mobile communications cable for marine and automotive

Belden

BELDSOL Magnet Wire is a dual film insulated Magnet Wire that combines the excellent dielectric characteristics of Polyurethane and the known toughness and solvent resistance offered by an overcoat of nylon. This wire is rated by IEEE tests for 130 C usage and will solder without insulation removal at 750 F.

BELDEN POLY-THERMALEZE is a dual polyester film insulated Magnet Wire rated for 180 C usage and has exceptional ability to resist solvents and abuse in difficult windings.

AUDIO CABLE SELECTION GUIDE

The choice of appropriate audio cables for runs of varying distances depends on many factors such as amplifier voltage output and power level as well as load impedances and the percent of power loss which can be tolerated. For this reason it is not practical to provide a general chart showing the recommended wire size for all conditions. The following chart shows the maximum recommended cable runs for various wire sizes selected for commonly encountered load impedances.

Wire Size (AWG)	Maximum Length of Cable Run (Ft.)					
	Low Impedance— 10% Power Loss			High Impedance— 5% Power Loss		
	4 OHM	8 OHM	16 OHM	100 OHM	250 OHM	500 OHM
14	88	176	352	1045	2610	5220
16	55	110	220	630	1574	3150
18	35	70	140	410	1020	2050
20	22	44	88	262	655	1310
22	13	26	52	164	410	820
24	8	16	32	105	262	525

The length of cable run for a given wire size can be doubled if twice the power loss can be tolerated in the cable.

The next smaller size can be used when twice the power loss can be tolerated in the cable and the length of cable run remains the same.

To use this chart for constant voltage systems, determine the load impedance using Step 1 below. If this impedance does not appear on the chart, use Step 2 to determine the maximum length of cable run for each wire size.

STEP 1 $Z \text{ (Load Impedance)} = \frac{E^2 \text{ (Voltage} \times \text{Voltage)}}{P \text{ (Watts)}}$

STEP 2 $\text{Ft. (Max.)} = \frac{\text{Ft. (chart)} \times Z \text{ (Load Impedance)}}{Z \text{ (chart)}}$

FOR EXAMPLE Find maximum length of run for

#20 AWG pair in a 70 volt, 25 watt system.

1. $Z = \frac{70 \times 70}{25} = 196 \text{ Ohms}$ 2. $\text{Ft. (max.)} = \frac{262 \times 196}{100} = 513 \text{ feet}$

Biraco-105—EXTRUDED PLASTIC TUBING

APPROVED FOR 105°C-OPERATION — MEETS MIL-1-631D SPECS — A quality plastic Vinyl tubing designed for electronic and electrical insulation work. Has high dielectric strength, extreme flexibility, non-flammability, abrasion resistance, impermeability to oil, water, alkalies, solvents, etc., high heat stability and resistance to aging. Meets all A.S.T.M. specifications, Mil. Spec. (Type F, Form U, Grades A and C, Class 2, Category 1).

TABLE OF PHYSICAL & ELECTRICAL PROPERTIES—BIRACO TUBING

Tensile Strength—2500 Psi. (Minimum Average)

Flammability—Non-Flammable

Ultimate Elongation—340%

Recommended for Temperatures to—105° C

Cold Bend—40° C

Dielectric Strength—.020" Wall—800 V/Mil

Varnish Baking—Good

Water Absorption

Weight Increase (1 Week)—0.1%—Fungi Resistance—Yes

Oil Resistance—Indefinitely flexible when immersed in oil.

Insulation Resistance—over 1,000,000 megohms.

IN STOCK

The Birnbach line of insulated sleeving and tubing is the basic quality line designed for the rigid performance requirements of the Aircraft, Electrical and Electronic Industries.

Meets or exceeds the required MIL Specifications and ASTM and NEMA standards. We invite your inquiries on special problems and requirements.

Birflex-130—VINYL COATED/FIBERGLASS SLEEVING

Per MIL-I-3190B and NEMA Standards to 130° C.

(ASTM, NEMA Grade B-B-1) MEETS MIL-I-3190 SPECS. — Quality Electronic and Electrical Tubing. It is Class B insulation that combines the best features of the inorganic fiberglass base sleeving with heat resistant, flexible plastic insulation. The plastic compound provides the highest electrical properties, heat stability (130° C.), flexibility and toughness. Meets performance requirements of specs. MIL-I-3190 A, NEMA VSI, ASTM D 372.

Birflon—TEFLON* SPAGHETTI TUBING

TFE EXTRUDED TUBING

Birflon T-500 Tubing is extruded from DuPont Tetrafluoroethylene Resin. Used in electronic and electrical equipment for connection of components, its flexibility, ease of handling has established it as the best and most popular insulation sheathing. This high temperature Class C insulation does not melt and flow as the conventional thermoplastic materials. Birflon T-500 Teflon has unique electrical, chemical and mechanical properties unmatched by any other type tubing for use in applications requiring high frequencies and high temperatures.

Because of Teflon's continuous service temperature of 250° C., which is more than 100° C. above other materials, the soldering technique is simplified since "Teflon" is not harmed by the hot barrel of the soldering iron—therefore, the assembly of aircraft, missile and electronic communication equipment is greatly speeded up. Thin Wall flexible Teflon Tubing can be processed easily into flexible and rigid printed circuits. As a thin, flexible insulation, it permits miniaturization and compactness of design never before possible.

Biraco — BIRFLON HEAT SHRINKABLE PLASTIC TUBING

BIRNBACH HEAT SHRINK POLYVINYL CHLORIDE PLASTIC TUBING NEW ALL PURPOSE TUBING WITH CONTROLLED SHRINKAGE (2:1—50%—SHRINK RATIO)

Series SK265 covers heat shrinkable PVC polyvinyl chloride plastic tubing. This flexible, electrical insulating tubing is extruded and its expansion is arrived at thru a patented secondary operation which builds a memory into the material. The memory is activated via the application of heat at approximately 130°C (266°F). The thinner the wall, the faster the shrinkage. The heavier the wall, the slower the shrinkage. In each case, the diameter is reduced to a predetermined size upon the application of heat and will maintain strength, insulating properties and form stability.

Material is SK265 PVC (Polyvinylchloride), flame resistant, self-extinguishing, dimensions as supplied in its expanded stage and after its recovery, with application of heat in excess of 130°C (266°F) shall be in accordance with noted table. Longitudinal shrink shall not be greater than 10%.

- NEW ALL PURPOSE TUBING — HAS CONTROLLED SHRINKAGE.
- SHRINKS IN SECONDS.
- FORMS A PERMANENT, TIGHT MECHANICAL BOND.
- PVC (POLYVINYLCHLORIDE).

TUBULAR BRAID PER MIL SPEC. QQ-B-575

Manufactured completely round as noted in MIL Spec. QQ-B-575, this tinned copper shielded braid has self-supporting characteristics which enables it to maintain its round shape. The shielding coverage percentage is 95% or more. This tubular braid is used in military applications where maximum shielding against electrostatic interference is indicated. In addition, it is used as a protective covering against mechanical abrasion and stresses for the wires, cables and other components.

STANDARD SPOOL PUT-UPS: 50' — 100' — 250'

*Values based on copper in free air at 65°F.

Additional constructions and variations made to order. Also available in silver plated copper, bare copper and stainless steel.

HEAVY FORMVAR (HF) TYPE T2

Single conductor round bare copper, baked film insulation from a varnish based on a vinyl acetal resin. 105°C.

Has new tough abrasion resisting film. Replaces enamel and fabric insulations for certain applications requiring exceptional abrasion resistance. Stable under heat. High dielectric strength. Infinite resistance to water and moisture. Does not fall after two hours at 105°C. Takes up less winding space.

Shielding Braid, Insulated Copper Wire, Braiding UNINSULATED COPPER WIRE

TINNED COPPER SHIELDING

Used for shielding and bonding on aircraft, marine and auto radio wires and cables. Shields speaker leads, lead-ins, amplifier wires. Extremely flexible, slides over wires and cables.

DESCRIPTION:

No. 853 thru 856/7—Composed of extremely flexible fine soft annealed copper tinned wires closely woven, braided and Rolled Flat.

No. 860—Composed of extremely flexible fine soft annealed copper wires closely woven, braided and Rolled Flat.

MIL-W-76B PLASTIC WIRE

TYPE MW—UNCOVERED PLASTIC 1,000 V

DESCRIPTION: Solid or extra flexible tinned copper, color coded medium wall polyvinylchloride insulation.

CHARACTERISTICS: Temperature rating —40° to +80°C. Voltage rating 1000 volts. Resistant to acids†, alkalis, oil, flame, moisture and fungus.

MIL-W-16878D—TEFLON*—HOOK-UP WIRE

MIL-W-16878D — TEFLON† WIRE

Type E—Extruded (600 Volts) —
High Temperature Rating — 90° To + 250°C

Chemically inert, non-flammable, excellent flexibility, easy stripping, high dielectric strength, unaffected by fungus. Exceeds Class H insulation requirements. Unaffected by high or low temperature. Outstanding for its dependability and long life under all operating conditions indoors or outdoors. Teflon permits miniaturization and compactness in electronic designs of sub-miniature components, computers, UHF equip., slip ring assemblies, leads to hermetically sealed and potted components, telemetering equip., and guided missiles. Nom wall .010". TFE extruded.

DESCRIPTION: Single conductor silver plated copper wire concentrically stranded and insulated with extruded or Teflon insulation.

SUBMINIATURE TEFLON* HOOK-UP WIRE

Per MIL-W-16878D Type ET 250 Volts, 200°C

This new exceptionally thin miniature hook-up wire is suitable in miniature slip ring assemblies, as interconnecting wire between wafers in microminiature electronic circuitry, instrument wire, medical wire, subminiature thermo-couple lead wire, strain gauge wire, etc. Provides lighter weight, greater flexibility and hi temperature resistance. Size Nos. 32 thru 20 conform to MIL-W-16878D type ET 250 volts, 200°C.

Hi-Voltage and Cathode Ray Cable

Used for 10,000, 20,000, 40,000, 60,000 volt applications as for cathode ray tubes in TV receivers, oscilloscopes and other electronic devices. Has dielectric constant of 2.7 and power factor of .002. Shielded Hi-Voltage type used to shield RF radiation in X-Ray, diathermy, medical equipment, and in transmitters.

DESCRIPTION: One conductor stranded copper tinned rulan (flame retarding type) polyethylene insulation. Available white/red tracer. Temp. Rating: 105°C
Shielded—Same as above with tinned copper braided shield overall.

KINKLESS TEST LEAD WIRE

Used with portable test equipment; as tested, leads in analyzers, oscillators, instruments; wherever extreme flexibility and limppiness is required. Has excellent dielectric properties.

DESCRIPTION:

No. 61—#20—41/36 extra flexible annealed tinned copper, stranded.

No. 66—#18—65/36 extra flexible annealed tinned copper stranded; paper serve; 3/4" special low capacity rubber, wax finish.

Colors: Red, Black.

Types WS-16/U Black, WS-17/U Red; No. 70 per MIL-W-13169
Specification available same construction as Birnback #66 except compound per specification.

200° C—Birsil Silicone Rubber Hook-Up Lead Wire—600 Volt

This Birsil Silicone Rubber Hook up lead wire withstands extreme temperature range and flexibility from —104°C, to +400°F, with retention of physical properties and is highly resistant to flex cracking at temperature extremes; fungus resistant; corona resistant; engineered for high-heat and hi-frequency applications; low power factor; acid-alkali-oil resistant; low dielectric constant; insulation approaching mica. Approved by U.L. but consumer must apply for Underwriter's Laboratories approval for individual product.

DESCRIPTION: One conductor, tinned copper strands, silicone rubber insulation, glass braid, lacquered. Color: White.

Birlene® Kel-F Hook-Up Wire

— 125°C to +175°C Meets MIL-W-12349-Spec

PERFORMANCE SPECIFICATIONS

Continuous: —60° to +175°C. Operating Voltage: 1000 volts RMS
Spark Test: 7500 volts. Dielectric Strength: 5000 volts at 60°C for 1 minute. Insulation Resistance: Greater than 5000 Meg Ohms/1000 Ft. at 60°C. Moisture Absorption: Nil. Flammability: Non-flammable. Resistance to Chemicals: All solvents and acids. Aging: Outdoor, 1 year; no detectable change.

DESCRIPTION: One conductor silver plated copper stranded, insulation—Monochlorotrifluoroethylene (Birlene Kel-F).

RUBBER OR NEOPRENE MICROPHONE General Purpose Multi-Conductor Shielded Control Cable

DESCRIPTION: Each Conductor, extra flexible stranded tinned copper, insulated with a .002" wall special low capacity rubber, color coded, conductors twisted, filler cotton wrap, tinned copper braided shield, cotton wrap with tough weatherproof black rubber or neoprene jacket overall.

Used for indoor and outdoor crystal, carbon and condenser microphones, public address systems, and control circuits, video and audio inter-connecting cable, broadcast and heavy-duty studio use.

NEOPRENE JACKET — HEAVY DUTY

DESCRIPTION: Each conductor stranded tinned copper, color coded rubber insulation, cotton wrap, braided tinned copper shield, cotton wrap, tough black neoprene jacket overall.

APPLICATIONS: Shielded microphone and electronic power cable. Control circuits: Video and Audio inter-connecting cable. Broadcast and heavy studio use, and for ground support equipment related to guided missile systems.

CHARACTERISTICS: Oil and acid resistant. Suitable for outdoor use and direct burial. Will resist aging and rough usage. Neoprene jacket.

RETRACTILE CORDS

RETRACTILE COILED COMMUNICATION CORD

Multi-conductor stranded communication cord No. 23 AWG. Tinned copper wire neoprene or Geon plastic jacketed. Long lengths can be cut to exact requirement. Adds product reliability. Useful wherever cords must change length or position. Nom. cond. resistance .022 ohms per linear foot, .185 ohms per retracted foot. Maximum working voltage 120 volts. Current carrying capacity 1 ampere.

Also available in retracted lengths of 12", 24" and 48".

RETRACTILE (KINKLESS) COILED SHIELDED COMMUNICATION CORDS

DESCRIPTION: Single and multi-conductor shielded microphone cable neoprene or geon plastic jacketed. This cable remains neat and compact with no danger of tripping or of the wire becoming entangled in equipment. Also suitable for stereo and additional speaker extensions. Shield can be pigtailed for soldering. No. 24 AWG Str. is 41/40 tinned soft cad. copper. No. 23 has 21/36 tinned soft cad. copper. Spiral wrapped tinned soft copper shielding.

HEAVY DUTY EXTENSION CORD SETS

(UL & CSA APPROVED)

DESCRIPTION: Extension cord sets manufactured for lasting service with a flexible 2 or 3 conductor quality black rubber cord. This rugged cord has a black molded plastic male and female plug on either end to fit conventional sockets and plugs.

APPLICATION: Small business machines, vacuum cleaners, lamps, movie projectors, or any other home appliance. 3 conductor cord used when 1 conductor requires grounding.

NEW—COMPLETE WIRE MEASURING OUTFIT

ACCURATE • COMPACT • NOISELESS

MEASURING MACHINE

Sturdy and compact construction. Has a precision quality built counter with large numbers for easy reading and will register wire up to 3,999 feet for direct accurate reading. Can be easily reset to zero position.

Wire passes through two rollers, the upper roller being self-adjusting and the tension of the upper roller can be set by a thumb screw to provide the proper grip for very fine as well as for heavy wire.

Two hardened lead bushings with an opening of 3/8" diameter will guide the wire properly through the rollers. Bushings are removable to allow cables up to 1" dia. to pass through. Will measure accurately all electric wires, cables, coaxial cables, rope, tape, etc.

WIRE WINDER

Has adjustable arms to be set to the desired coil size and the arms will open to a flat position for easy removal of the coil. Simply open thumb screw which holds the front collar tight on the shaft, push the collar in any direction to the desired position and tighten the thumb screw again.

HOLDING REEL

Compact, adjustable to size of coil and folding. Will hold spools or coils of wire.

DURAFOAM UHF/VHF TELEVISION TRANSMISSION LINE*

Over 25,000,000 Feet Already in Use

Durafoam quality is so high that we can offer an unconditional 15 year guarantee. Its high reliability construction features two tubes of cellular polyethylene, to assure low signal loss, and a heavy black polyethylene Permaline insulation, to offer the maximum protection against deterioration caused by moisture, chemicals, salts and sunlight.

Durafoam is also extremely easy to install, cutting down the amount of time required to reach job.

PERMALINE TV TRANSMISSION LINES

It is now over 12 years since Columbia introduced Permaline television transmission line, the only television wire available today with a written guarantee against deterioration. In all this time we have yet to replace one single foot of this wire for reasons of deterioration, proving beyond all doubt that Permaline insulation has no equal for long life under the most severe atmospheric conditions.

Permaline is a high molecular weight polyethylene containing a very small percentage of carbon black to provide maximum resistance to the ultra violet rays in sunlight which has been proven the chief factor in the deterioration of ordinary television wire.

Electrical characteristics of Permaline are very similar to brown polyethylene television lines, but as there is no deterioration attenuation remains constant instead of increasing as is the case with brown polyethylene which becomes brittle and cracks. Remember it is not how THICK but how GOOD!

PERMAFOAM LOW LOSS COAXIAL CABLES

PERMAFOAM is a new type of coaxial cable for television systems, communication work, and all other co-ax applications. A foam polyethylene dielectric replaces the conventional solid polyethylene thus providing far lower capacity and attenuation. In fact, attenuation is approximately 25% lower than standard coaxial cables of same type. Overall jacket is our PERMALINE high molecular weight polyethylene. This non-contaminating jacket is unaffected by salt air, chemical fumes, damp rot, fungus, acids, alkalis, etc., and is remarkably resistant to all extreme weather conditions. Moisture resistance is so high that this insulation is now used on submarine cables. Will withstand severe temperature extremes and is immune to the deteriorating effects of sunlight and other ultra violet. Note: In addition to the PERMAFOAM cables listed below, any other RG U cable is available with a foam polyethylene dielectric on special order.

FLEXFOAM ULTRA LOW CAPACITANCE MICROPHONE CABLES — EXCLUSIVE WITH COLUMBIA

Another Columbia first is a complete line of microphone cables with capacity as much as 35% lower than the best regular microphone cables available today. This drastic lowering of capacity has been made possible by the use of foamed polyethylene as the inner dielectric instead of solid polyethylene as normally used. This low capacitance means that lengths of microphone cable can be increased as much as 50%. These cables are also ideal for Hi-Fi and high quality sound work because of the extremely low attenuation, particularly at the higher audio-frequencies. The use of a special flexible vinyl as an outer jacket provides flexibility practically as good as rubber yet has much greater abrasion resistance. Color—Grey.

Also available in high gloss gleaming white jackets.

COLUMBIA SUPER-FLEX

ULTRA FLEXIBLE FOAM COAXIAL CABLES

We believe Super-Flex Coaxial Cables are the finest available today — not only because of their appearance and flexibility, but because they actually out-perform any similar type of coaxial cable in use today. Cables feature High Gloss Non Contaminating Jackets and have a primary insulation of foam Polyethylene to reduce attenuation as much as 25% over regular types of coaxial cables. In addition to the above features Super-Flex Coaxial Cables will not become rigid in severe cold. Can be used with standard connectors. Ideal for citizens band and amateur use. Perfect for master television systems due to the wide range of colors available. Standard stock colors are: Black-White-Silver or Beige. Other colors to special order with a minimum of 5000 ft. of a color.

	5566	2 Condr.	22 Solid	.015	Bare copper .015 rubber insulation with a black cotton braid weatherproof finish. Conductors coded for easy identification. Ideal for exterior or interior communication installations.	.181x.203

TELEPHONE AND COMMUNICATION CABLE DIRECT BURIAL TYPE

FULLY COLOR CODED

SPECIFICATIONS

Solid bare annealed copper 22 Awg. gauge conductors; thin wall, color coded, polyethylene insulation; conductors twisted to form pairs with symmetrical varying lays to minimize cross-talk; cabled (for 6 thru 50 pairs) by stranding pairs in concentric layers, or (for 75 thru 400 pairs) by stranding pairs into concentrically formed units, which are in turn cabled to form the complete assembly; non-hygroscopic binder tape furnishing high dielectric strength between shield and individual conductors; continuous copper shielding tape; high-molecular weight, polyethylene jacket.

GENERAL APPLICATION AND ADVANTAGE

APPLICATION: Communication and Telephone Cable for use in direct burial installations provides a high quality product similar to that used for aerial and duct systems, but with the addition of protective armoring. This minimizes the possibility of damage to the cable from rodents and insects and, correctly installed, reduces the dangers to the cable from sharp stones and other hazards of underground burial installations.

ADVANTAGE: The lightweight, but rugged construction of direct burial Communication and Telephone Cable permits fast and economical underground installation of communication systems with the assurance of dependable and enduring service. This is made possible through utilization of the same high quality polyethylene compounds that are used in its counterpart for aerial and duct type installations, with the added protection of copper armoring tapes and a durable, high-molecular weight, polyethylene jacket.

CONSOLIDATED WIRE PAGE 15

MAGNET WIRE

Popular, profitable specialty wire packaged for easy selling in radio-electrical, department, specialty and hardware stores. Wide variety of sizes and insulations. Keeps stock in perfect order, always saleable. Supplied on Spool as shown and in Heavier Weights for whatever weight desired. Here is a handy and convenient way to stock small quantities of wire. It prevents wire from matting or tangling.

SPECIAL MAGNET WIRES

In addition to the standard listing shown here, we maintain an extensive stock of all other sizes in round, rectangular and square magnet wire.

BARE NICKEL CHROMIUM WIRE

No. 2000

Recommended for electrical heating appliances and other devices where the highest quality in performance is required, whose operating temperatures do not exceed 1850° F. Particularly suited for heavy duty rheostats and controls which require compact resistance.

DABURN**DABURN ELECTRONICS & CABLE CORP.**

WIRE • CABLE • TUBING • MIL/COMM • SWITCHES • ELECTRONIC HARDWARE

**DAFLEX PLASTIC TUBING****105°C POLYVINYLCHLORIDE (PVC) MEETS MIL-I-631D SPECS**

Specifically compounded vinyl resins for superior all around performance. UL approved for 105°C, conforms to Spec MIL-I-631D Type F, Form U, Grades A and C. Class 1 and 2, Category 1. Resistant to heat, oil, water, chemical corrosion, fungi and aging. Very high abrasion resistance. Will retain its flexibility. Suitable for covering and protecting wires and cables. Designed for electrical, electronic and aircraft applications. Non-flammable. Meets ASTM—D876, ASTM—D922.

DAFLEX VINYL COATED FIBERGLASS TUBING 130**MEETS MIL-I-3190B SPECS (ASTM, NEMA GRADE B-B-1)**

DAFLEX 130 is recommended for continuous temperatures up to 130°C. Constructed to provide a tough, flexible, heat resistant tubing. Made from an inorganic fiberglass base sleeving with heat resistant plastic coating, extremely flexible tough plastic insulation. Will not support combustion. Meets MIL-I-3190B, NEMA VSI ASTM D372, MIL-I-21557

PROPERTIES OF DAFLEX 130 VINYL COATED FIBERGLASS
Recommended for Temperatures to 130°C

Max. Low Temperature Flexibility —20°C

Dielectric Strength 4000 V/MIL

Dielectric Constant 7.0

Tensile Strength — Min. (PSI) 1500

Ultimate Elongation 350%

Will not support Combustion, Abrasion, Oil, Chemical Corrosion Resistance Excellent

Fungus Resistance Good

Gamma Radiation Dosage to 25% 10⁵

Degradation ERGS/GRAM Color Stability even on Prolonged Baking at Elevated Temperatures

DAFLON TEFLON® SPAGHETTI TUBING

Daflon 500 and 550 tubing is extruded from Dupont tetrafluoroethylene resin and is unmatched by any other tubing for use in applications for hi frequencies and hi temperatures. Rated for continuous operation of 250°C it retains its toughness and flexibility thruout. Has high resistance to fatigue and stresses. Will not shrink back during soldering operation. Non-flammable, flexible, it permits miniaturization of design and compactness. Lowest coefficient of friction. Inert to all fungus growth. Conforms to **MIL-I-22129C Spec.** AMS 3651B, 3653B, 3654, 3655.

TABLE OF PROPERTIES

Test	ASTM Method	Result
Tensile Strength, 73°F.	D638-52T	1500-300 Lb/Sq. In.
Elongation, 73°F.	D638-52T	100-200%
Deformation Under Load—122°F. 1200 Lb/Sq. In., 24 Hrs. 2000 Lb/Sq. In., 24 Hrs.	D621-51 D621-51	4-8% 25%
Hardness Durometer	D676-49T	D50-D65
Heat Distortion Temp., 6 Lb/Sq. In.	D648B-45T	250°C

SHRINKABLE IRRADIATED POLYOLEFIN TUBING

This series is designed for maximum mechanical strength at stress or points of connection. It is strong and abrasion resistant and is supplied in expanded sizes. It insulates, jackets, splices, encapsulates, weatherproofs components, connectors, cables and irregular shaped objects. When exposed to heat (235°F) the tubing shrinks 50% in diameter, 5% longitudinal contraction. Controlled shrinkage to exact requirement takes place. Meets or exceeds MIL-12053 (WEP) Class 1 specs.

OPERATING TEMPERATURE: -55°C to +135°C.

SPECIFICATIONS

All Tests Made on Tubing in Recovered Dimension

Continuous Operating Temperature	135°C
Longitudinal Change	5% Max.
Tensile Strength	1500 PSI Min.
Ultimate Elongation	200% Min.
Special Gravity	1.29 Max.
Low Temperature Flexibility (-54°C)	No Cracking
Shrinkage Ratio	2:1 (50%)
Dielectric Strength	500 V/MIL Min.
Dielectric Constant	2.87 Max.
Corrosive Resistance	Non-Corrosive
Resistance to Soldering Iron	Excellent
Fuel, Oil, Solvent, Acid, Alkali, Hydraulic Fluid Resistance	Excellent

HEAT SHRINKABLE TEFLON® TUBING**DAFLON SH-400 (FEP)**

Made with Modified TEFLON® FEP will shrink over inserted objects upon exposure to moderate heat. Heretofore, many joints, parts, components, devices could not be protected because of hi temperature required for shrinkage; Can now use this FEP TEFLON® which has a continuous service temperature of 400°F. Will shrink at 300°F. Supplied in natural color. Complete shrinkage at 350°F. Now, many heat sensitive products can use the permanent protection of TEFLON®. Will not burn or support flame, long lengths available. Extruded.

Daburn No. HG2 — Heat Gun for SH-275 and SH-290 Series.

DABURN SHRINKABLE POLYVINYLCHLORIDE ALL PURPOSE

Shrinkage Ratio: 2:1 (50%)

Flexible, shrinks 50% on heat application, less than 10% longitudinal contraction. Suitable for insulating components and cables in varying shapes and diameters. Has a higher resistance to oils than low density polyethylene. Conforms to MIL-I-6310, Type F, Form V, Grade A and C, Class 1 and 2. Cat. 1. Controlled shrinkage on application of heat to predetermined size takes place in seven seconds at above 266°F.

OPERATING TEMPERATURE: -20° to +105°C.

TUBULAR BRAID PER MIL SPEC QQ-B-575

Tinned copper shielded braid m'd completely round per Mil Spec QQ-B-575. Maintains its round configuration. Shielding coverage is 95% or more. Used in military applications where maximum shielding is required against electrostatic interference. Useful against mechanical abrasion and stresses for cables — as grounding cable.

SUBMINIATURE TEFLON® HOOK-UP WIRE

PER MIL-W-16878D—TYPE ET—250 VOLTS, 200°C.

Thin miniature hook-up wire is suitable in miniature slip ring assemblies, as interconnecting wire between wafers in microminiature electronic circuitry, instrument wire, medical wire, subminiature thermo-couple lead wire, strain gauge wire, etc. Provides lighter weight, greater flexibility and its temperature resistance. Size Nos. 32 thru 20 conform to MIL-W-16878D type ET 250 volts, 200°C. Silver plated copper conductor.

2772	1	20	26/34	36 MMF	4000	.175"
2773	1	25	7/33*	34 MMF	3500	.144"
2774	1	25	7/33*	23 MMF	5000	.190"

* 3 strands tinned copper, 4 strands tinned copperweld.

**SPIRAL WRAPPED
SHIELDED MICROPHONE CABLE**

Uses tinned copper spiral shield — for ease in soldering — extremely flexible.

DABURN Cat. No.	Cond.	Size	Strand	Nom. Cap./Ft.	Sug. Work Voltage	Nom. O.D.

STD. PUT-UP: 100 Ft., 250 Ft., 500 Ft., 1000 Ft.

CONDUCTOR COLOR CODE: 1—White, 2—Black, 3—Red, 4—Green, 5—Yellow, 6—Blue, 7—Brown, 8—Orange, 9—Purple, 10—Slate.

**PLASTIC JACKETED AUDIO
AND MULTI-COND. CABLE****SPIRAL WRAPPED COPPER SHIELD**

Suitable for P.A. and sound systems, schools hospitals, institutions, recording studios, paging and call systems. Each conductor copper tinned, plastic insulation, color coded, twisted, spiral wrapped tinned, copper shield, gray plastic jacket.

Simplifies pigtailng. Provides almost 100% shielding coverage.

SHIELDED ULTRA LOW CAPACITY MICROPHONE CABLE
Plastic Jacket—Cellular Foam Polyethylene Insulation
BRAIDED SHIELD

DESCRIPTION: Constructed with white foam polyethylene insulation, braided tinned copper shield, chrome gray vinyl jacket. The low loss foam polyethylene construction has lower capacitance and attenuation than standard polyethylene mike cables as much as 50%. This increases the effective length of cable as much as 50% without signal loss.

OPERATING TEMPERATURE: -20°C to +60°C.

SILICONE RUBBER LEAD WIRE
600 VOLT — 200°C

FLEXIBILITY FROM -104°C TO +400°F

Suitable for high-heat and hi-frequency applications. Resistant to acid, alkali, oil. Retains physical properties under extremes. Low power factor, low dielectric constant. Tinned copper, stranded, silicone rubber insulation, glass braid, lacquered. Color: White.

DESCRIPTION: One conductor, tinned copper strands, silicone rubber insulation, glass braid, lacquered.

COLOR: White.

PLASTIC HOOK-UP WIRE**600 VOLT UL APPROVED — 105°C****(CSA 600V — 90°C)**

Resistant to acids, alkalis, oil, flame, fungus and moisture. Temperature Rating: -10°C to +105°C.

DESCRIPTION: One conductor, stranded annealed copper tinned, plastic insulation.

NEW HI-VOLT CORONA RESISTANT TEFLON* CABLE

Voltage Rating at Sea Level • Voltage Rating at 80,000 feet, approximately 1/3 lower • Minimum life expectancy: 10,000 hours.

SMALL SIZE:

You do not need bulky, thick, insulation jacketing as used with silicone rubber and polyethylene insulations to get your hi-voltage requirements. Wire used is MIL-SPEC QQ-W-343 and MIL-W-16878D. Insulation used conforms and surpasses MIL-SPEC-W-16878D.

AVOID CORONA PROBLEMS:

Corona resistant Teflon construction is specifically designed to retard and prevent corona penetration. Temperature variations from -60° to +300°C have no life effect on the corona resistant Teflon. In addition, there is no stress or crack failure under severe, adverse conditions including mechanical strain, moisture, corona or chemical conditions.

PUT-UP: 250', 500', 1000'

WIRE • CABLE • TUBING • MIL/COMM • SWITCHES • ELECTRONIC HARDWARE

TEST LEAD WIRE

Suitable as Test Lead Wire in analyzers, instruments, oscillators, meters, etc. Wherever extra flexibility and limpness is necessary. Single conductor, extra flexible stranded soft tinned copper, separator, wall color coded rubber, smooth wax finish.

OPERATING TEMPERATURE: -20°C to +60°C.

DABURN No.	Size	Strand	Insul. Wall Nom.	Nom. O.D.

*Types WS-16/U Black, WS17/U Red Per MIL-W-13169.

STD. PUT-UP: 100 Ft., 500 Ft., 1000 Ft.

PLASTIC KINKLESS TEST LEAD WIRE

Soft formulation vinyl for maximum flexibility. Temperature stability from -80°C to +115°C. Exceed requirements for MIL-I-3930A Type JP (PVC).

Suitable for test leads, etc. Resistant to gasoline and oil. Excellent abrasion resistance.

DESCRIPTION: One conductor tinned copper stranded, special formulation vinyl insulation — smooth surface.

OPERATING TEMPERATURE: -80°C to +115°C.

COLORS: Black, Red, Yellow, Green, White, Blue.

**NEW CONTROL CABLE
HEAVY DUTY MULTI-CONDUCTOR**

PORTABLE TYPE SO
NEOPRENE JACKETED — 600 VOLT

DESCRIPTION: Stranded bare copper each conductor, rubber insulation color coded, filler where necessary, wrap over conductors, flexible heavy duty black Neoprene jacket overall.

Recommended for outside installation, this heavy duty control cable resists oil, ozone, sunlight, moisture, impact and abrasion. Suitable for remote control automatic equipment, telemetering, signal transmission.

**TEFLON* FIBERGLASS FLAT BRAIDED
LACING TAPE**

Teflon coated fiberglass flat braided lacing tape bonded for high temp. operations (550°F). Stays flat—for strength, stability. Teflon finish increases strength and abrasion resistant surface. Will not cut or damage insulation.

**NYLON CABLE
CLAMPS****MADE OF DU PONT "ZYTEL" 101 NYLON RESIN**

Meets MIL-P-26093A and MIL-P-17091A Amend. 2. Light and tough these nylon cable clamps are used as a clamp, strain relief, clip hanger, fastener or strap. Smooth non-abrasive surfaces, rounded edges will not cause shorts or grounds in cable. Insoluble in solvents, gasoline, oils, hydraulic fluids, alcohol, acids, alkalies. Temperature range -60°F to +300°F. Does not support combustion. Inside matte finish. Prevents slipping and is self aligning. Snaps on cable. Meets MIL-P-26093A specs. Fungus resistant.

DABURN PUSH BUTTON WIRE TIES

Push button wire ties for harnessing wire. 4 1/2" in length, each tie is adjustable to 30 different diameters. Made of strong polyethylene, it is inert chemically and heat resistant. Breaking strength 45 to 95 lbs. After the tie is placed in hole for anchoring, wires can be replaced or added by loosening tie and pulling tight again. Designed to fit .250" - .265" hole in a .031" to .140" thick panel. Material conforms to Spec. LP500.

*for Neoprene, Butyl and Viton Clips. Ask for special recommendations for Silicone Clips.

Standard pack: 500. Packed in polyethylene bags in cardboard cartons.

Adjustable P-Clips Nine (9) Sizes Fit Any Loop Diameter From 1/8" Through 2".

- Molded of finest natural, virgin nylon.
- Lightweight, chemical and abrasion resistant, high tensile strength, excellent dielectric properties, rust and rot resistant.
- Typical applications include: cables; bundles of wires, components, pipes and tubing wherever a clamp, strain relief or strap is required.

ADVANTAGES OF ADJUSTABLE FEATURE:

- Reduces Inventory.
- Permits Quantity Purchases with Better Discounts.
- Controls Tension.

Size No.	Adjustable Loop Range	Screw Clearance
0	1/8" - 3/8"	No. 4
1	3/8" - 1/2"	No. 4
2	1/4" - 3/8"	No. 6
3	3/8" - 1/2"	No. 6
4	3/8" - 7/8"	No. 10
5	7/8" - 1 3/8"	No. 10
6	1 3/8" - 1 1/2"	No. 10
7	1 1/2" - 1 3/4"	No. 10
8	1 3/4" - 2"	No. 10

Strapping

Material: PVC (Polyvinylchloride); extremely strong; temperature range -26°F to +180°F

Packing: Strap, 75 ft. coil boxed; or 500 or 1000 ft. coils on reels. Studs, 1000 per box.

For panel mounting a Strap Saddle is available for use in combination with the AV 5 strapping. Lay wire bundle into Strap Saddle fastened to panel. Thread Strapping through wings of saddle and fasten. Material is molded nylon. Temperature range: -76°F to +250°F.

Installation: Stud is inserted in end of strap extending from dispenser carton; strap is then passed under and around wire bringing it back, under tension, over stud again. Strap is then cut at next hole. This operation should be repeated approximately every 6 inches or as required.

ELECTROVERT^{INC} COMPONENTS AND EQUIPMENT DIVISION

SEND FOR COMPLETE CATALOG AND PRICES

Spiroband Reduces inventory costs • Three standard materials — natural polyethylene, ultraviolet resistant, fire resistant • Three diameters, each for application to a wide range of bundle sizes.

Size No.	Outside Diameter	Wall Thickness	Length of Std. Coil
1/2	.500	.062	25 ft.
3/4	.250	.045	100 ft.
1 1/8	.125	.032	100 ft.

MATERIAL SPECIFICATIONS

Natural Polyethylene: (grade specification shown in table at right) color is clear.

Ultraviolet Resistant: basically same as above with additives to withstand ultraviolet rays which color material black.

MATERIAL	Natural Polyethylene — DFD-2005
PROPERTIES	Brittleness (D746) —85°C = -121°F Dielectric constant (D150 —23°C) 2.27
SPECIFICATIONS	ASTM: D1248-58T, Type 1, Class A, Grade 4 Federal: L-P-590, Type II, Grade 4 REA: PE-23

Fire Resistant: as above, but with additive which colors material bone white.

"C" markers

Clip-on type. Quick, easy to fit after connection is made or terminal tag fitted. May be removed for re-coding. Same marker used for right or left hand entry.

Materials: Durable resilient PVC.

Colors: White with black markings (standard). Also available in black, blue, red, green and yellow.

Markings: Single; numerals 0-9, letters A to Z and symbols.

Packing: 50 markers of same size, color and marking.

Size No.	Recommended for Wires/Cable of O.D.

Colors: White with black markings (Standard color). Black with white markings, Blue, Green, Yellow, Red with black markings.

Material: PVC MIL-1-631C, Type F, Form U, Grade a & b, Class I, Category 1, finish: glossy. Specific gravity: 1.21. Hardness (shore A): 73 av. Tensile Strength: 2600 psi. av. Ultimate Elongation: 350% av. Dielectric Strength (20 mil specimen): 750 volts/mil. Cold Brittle Temp. (50% non-failure): -65° F.

Markings: Single: numerals 0-9, letters A to Z, symbols +, -, ~, ±. Multiple: any 2, 3, 4 or 5 unit combinations of above.

Packing: Coil of 50 single markers, one size, color and character per polyethylene covered cards. Coil of 500, as above, on self-servicing reels.

Min. Quantity: per size, and character: 50 single white, 500 multiple, 500 colored. **Min. Order:** 500 markers.

"S" markers for cables with O.D. of more than .500".

Strap-on-marker: Size: 3/8" x 3/8" x .040", material P.V.C., colors and material same as ELECTROVERT "Z". Markings: 0-9, A-Z, +, -, ~, ±.

Applications Strip: P.V.C.—covered aluminum, 4 mm wide 0.6 mm thick.

Min. Quantity: Per size, color and character: 50 markers.

Min. Order: 500 Markers, 165' coil of strip.

Packing: Markers, 50 per indicator card pouch; strips in 165' coils.

Grommet Strip with the "Snip-n-Fit" feature

U-shaped, strip-type grommeting material can be cut to size, provides smooth surface around edge of any hole and features quick, simple application. No adhesive or special tools required.

...offers the advantage of one strip only for applications to: round holes; square holes; rectangular holes; oval holes.

Specifications: ASTM: D-1248-58T, Type 1, Class A, Grade 4. Federal: L-P-590, Type II, Grade 4. REA: PE-23. MIL-C-17C, Cable, radio frequency, coaxial, dual coaxial, twin conductor and twin lead. MIL-W-76B, Insulated hookup wire. MIL-C-915A, Electrical cable for shipboard use.

WIRE and CABLE TIES

Cable ties, an efficient, cost cutting and time proven asset to any operation, large or small, as a single replacement or on an assembly line. Easily utilized by skilled or unskilled manpower and eliminating many of the problems of difficult lacing. GC cable ties are widely used today by manufacturers of electronic equipment, by the US Government, computer manufacturers, even on automobile production lines. Consider cable ties for your operation. Learn how they cut operation costs and keep customers happy.

PLASTIC

Tough and flexible. Chemically inert. Available in Red, Yellow, or Blue in four different lengths. Smart looking...a compliment to any assembly. Special SNAP BUTTON model holds wire and cable bundles to walls, chassis, cabinets, fire walls etc.

ELECTRORAFT PLASTIC CABLE CLAMPS

Electrocraft Cable Clamps are used for fastening cables, harnesses, tubing, etc. Lightweight, durable, with excellent electrical and mechanical properties. Two materials: (1) Ethyl Cellulose, for normal industrial and commercial uses—where temperatures range from -40 degree F. to 185 degree F. (2) Nylon (Zytel), for extreme durability and high resistance to temperature (-50 degree F. to 300 degree F.) and most chemicals.

ELECTRONIC COMPONENTS

INSULATING TEFLON* TUBING

Exceptionally tough and flexible. Withstands temperatures from 450 degrees below zero F. to 500 degree above zero F. Will not melt solder joints. Outstanding dielectric properties — zero moisture absorption. Chemically inert. Completely weatherproof. Wires can be inserted much more easily than in any other tubing.

*Registered trademark DuPont Co.

GC NO. 75 STANDARD THIN NYLON CORD .028" DIAMETER

Nylon cord with a fiberglass core. All especially treated to prevent stretching and slipping. GC cords No. 75, 75-A and 74 will handle 90% of replacements. 25 ft., 50 ft., 100 ft. spools are supplied in permanent, clear plastic containers.

Used on 95% of the latest sets manufactured. Made of finest braided nylon over a Fibreglass Core. It is pre-stretched and chemically treated.

Cat. No. 75-25	25 ft. spool	Net .75
Cat. No. 75-50	50 ft. spool	Net 1.43
Cat. No. 75-100	100 ft. spool	Net 2.37
Cat. No. 75-1000	1000 ft. spool	Net 15.57

GC NO. 74 MEDIUM NYLON CORD .040" DIAMETER

Used on models of RCA, Philco, Majestic, Wells Gardner, etc. Made of finest braided Nylon over a Spun Fibreglass Core.

Cat. No. 74-25	25 ft. spool	Net .75
Cat. No. 74-50	50 ft. spool	Net 1.43
Cat. No. 74-100	100 ft. spool	Net 2.37
Cat. No. 74-1000	1000 ft. spool	Net 19.77

GC NO. 75-A EXTRA THIN NYLON CORD .025" DIAMETER

Used on Motorola, RCA, Sentinel, Stromberg Carlson, and others. Extra thin, made of finest braided Nylon, chemically treated.

Cat. No. 75A-25	25 ft. spool	Net .75
Cat. No. 75A-50	50 ft. spool	Net 1.43
Cat. No. 75A-100	100 ft. spool	Net 2.37
Cat. No. 75A-1000	1000 ft. spool	Net 14.25

GC NO. 70 BRAIDED BRONZE CABLE .035" DIAMETER

Braided phosphor bronze cable made over a Fibreglass core for greater strength and flexibility. Will not unravel.

Cat. No. 70-25	25 ft. spool	Net .97
Cat. No. 70-50	50 ft. spool	Net 1.63
Cat. No. 70-100	100 ft. spool	Net 2.70
Cat. No. 70-1000	1000 ft. spool	Net 22.20

GC NO. 71 42-STRAND BRONZE CABLE .040" DIAMETER

42-strand twisted phosphor bronze cable used on Majestic, Bosch, Philco, etc. 42 line strands braided over a cotton core.

Cat. No. 71-25	25 ft. spool	Net 1.23
Cat. No. 71-50	50 ft. spool	Net 1.88
Cat. No. 71-100	100 ft. spool	Net 3.52
Cat. No. 71-1000	1000 ft. spool	Net 25.80

GC NO. 73 HEAVY NYLON CORD .062" DIAMETER

This is a heavier cord such as used on models of Philco, Silver Marshall, Majestic, Brunswick, etc.

Cat. No. 73-25	25 ft. spool	Net 1.92
Cat. No. 73-50	50 ft. spool	Net 1.73
Cat. No. 73-100	100 ft. spool	Net 2.97
Cat. No. 73-1000	1000 ft. spool	Net 24.90

GC NO. 76 SPECIAL THIN BRONZE CABLE .023" DIAMETER

Extra thin braided bronze cable such as is used on GE and RCA sets. Also used for speaker cones, pigtail, etc.

Cat. No. 76-25	25 ft. spool	Net .97
Cat. No. 76-50	50 ft. spool	Net 1.63
Cat. No. 76-100	100 ft. spool	Net 2.70
Cat. No. 76-1000	1000 ft. spool	Net 22.20

GC COLOR TV NO-STRETCH DIAL CORD

EXTRA FINE .025" diameter		supplied on metal
spools.		
Cat. No. 87-25	25 ft. spool	Net .90
Cat. No. 87-100	100 ft. spool	Net 2.70

STANDARD .028" diameter - supplied on metal spools.		
Cat. No. 88-25	25 ft. spool	Net .90
Cat. No. 88-100	100 ft. spool	Net 2.70

MEDIUM .040" diameter - supplied on metal spools.		
Cat. No. 89-25	25 ft. spool	Net .90
Cat. No. 89-100	100 ft. spool	Net 2.70

GC DIAL CABLE TOOL

A handy tool to aid in replacing worn out cables or cables slipped off of drums, to replace dial cord springs also.

Cat. No. 5096	Net .60
---------------	---------

GC RCA TUNER BELT

Belt used on RCA Tuners such as 8T, 8TC, 8TK, 9TC, etc.

Cat. No. 195	Net .30
Exact replacement for 1956 model RCA TV sets.	
Cat. No. 197	Net 1.10

GC AC-DC INDOOR ANTENNA WIRE

Antenna lead wire for indoor type AC-DC sets. Flexible copper wire covered with brown plastic insulation.

Cat. No. 840 25 ft. coil	Net .37
--------------------------	---------

GC 300-OHM LINE PROTECTIVE TUBING

Clear plastic tubing will fit over 300-ohm flat lines and will protect the line from grounding and rubbing on corners of buildings, eaves, etc. It actually protects and waterproofs the line.

Cat. No. 625 Box of 8 ft.	Net .75
Cat. No. 626 250 ft. coil	Net 18.29
Cat. No. 627 1000 ft.	Net 68.26

GC GENFLEX PLASTIC TUBING

High grade extremely flexible plastic tubing for radio and electronic insulation work. Highly resistant to cold or heat. High dielectric strength, average 8000 volts.

Colors: Black, Red, Green and Clear (Specify color).	
Cat. No. 603 16 B-S Gauge, .042 I.D., 20' pkg.	Net .82
Cat. No. 605 16 B-S Gauge, .053 I.D., 20' pkg.	Net .82
Cat. No. 607 14 B-S Gauge, .066 I.D., 20' pkg.	Net .82
Cat. No. 609 12 B-S Gauge, .085 I.D., 20' pkg.	Net .82
Cat. No. 611 10 B-S Gauge, .106 I.D., 15' pkg.	Net .82
Cat. No. 613 8 B-S Gauge, .133 I.D., 15' pkg.	Net .82
Cat. No. 616 6 B-S Gauge, .166 I.D., 10' pkg.	Net .82
Cat. No. 617 4 B-S Gauge, .208 I.D., 10' pkg.	Net .82
Cat. No. 620 2 B-S Gauge, .263 I.D., 10' pkg.	Net .82

GC SERVICEMEN'S KIT

Handy kits of assorted colors and sizes. Ideal for experimenters and servicemen. Kit of 25 ft. assorted. Sizes 18 to 10 Genflex Tubing.

Cat. No. 635	Net .82
--------------	---------

GC ASSORTED SPAGHETTI KIT

An assortment of 75' lengths of spaghetti wiring, 26 lengths to the kit. Sizes include from No. 17 wire to 3/8" I.D.

Cat. No. 550	Net .40
--------------	---------

SPAGHETTI AND SLEEVING ASSORTMENT

A variety of sizes and colors are included in high grade varnish tubing. Put up in attractive box.

Cat. No. 551	Net .90
--------------	---------

GC PLASTIC TUBING KITS

Best grade varnished tubing but in convenient 20 ft. lengths. Will fit wire from No. 12 to No. 18. Colors: Black, Red, Yellow, Green and Blue.

Cat. No. 499	Net 1.67
--------------	----------

GC RADIO SPAGHETTI

High grade spaghetti for radio-television work. Average dielectric strength 4000 volts. Very flexible. Smoothly coated with best grades of varnish. Material is approved by A.S.T.M. Colors: Black, Brown, Red, Green and Yellow (Specify color). 30' lengths.

Cat. No. 500 No. 20, 16 ft. wire	Net 15
Cat. No. 503 No. 17, 18 ft. wire	Net 15
Cat. No. 506 No. 14, 14 ft. wire	Net 17
Cat. No. 508 No. 12, 12 ft. wire	Net 17
Cat. No. 512 I.D. 1/8"	Net 23
Cat. No. 515 I.D. 3/16"	Net 25
Cat. No. 518 I.D. 1/4"	Net 40
Cat. No. 521 I.D. 3/8" (resist. size)	Net 63
Cat. No. 522 I.D. 7/16" (red and black)	Net 73
Cat. No. 523 I.D. 1" (red and black)	Net 103

GC MOTOROLA TV DIAL BELT

Replacement belt as used on Motorola TV Tuners. Original replacement part.

Cat. No. 196	Net 30
--------------	--------

GC LAMINATED PHENOLIC PLASTIC PANELS

Black laminated panels. 1/16" thick. Black Color: black.

Cat. No. 590 6" x 6"	Net .42
Cat. No. 591 6" x 12"	Net .82
Cat. No. 592 12" x 12"	Net 1.58

ICORE

ELECTRO-PLASTICS, INC.

a subsidiary of ICORE INDUSTRIES

During the manufacturing process, HEATRAX tubing is expanded beyond its original extruded diameter. It will shrink back, or recover to, this original state when heat is applied briefly. Special formulations and irradiation improve its ability to return to original dimensions, assure more uniform recovery, and develop superior strength and crack resistance. When irradiated, HEATRAX materials will not melt at elevated temperatures.

HEATRAX offers these advantages in applications:

1. Elastic memory—tubing shrinks quickly on application of heat to form a tight cover, even over irregularly shaped objects
2. Thermal stability
3. Outstanding electrical characteristics
4. Excellent mechanical properties
5. Excellent chemical and solvent resistance

The table of Typical Properties below supplies comparative characteristics for the various HEATRAX materials. The following brief description will also be helpful in selecting the proper type for specific applications:

Catalog #HIX—IRRADIATED POLYOLEFIN

Shrink ratio 2 to 1 (expanded to recovered diameter) Temperature range: from 135°C/275°F to —55°C/—65°F

This flexible, general purpose material will not cold flow, never melts and will not split on applications within temperature range. It is less expensive than Teflon HEATRAX. Compared with Vinyl HEATRAX, it is superior in mechanical and dielectric strength, and has less longitudinal shrinkage, higher corrosion resistance and a wider temperature range.

HIX is supplied in two classes:
I-Flame Retarded II-Clear (not flame retarded)
Available with U/L approval.

Catalog #HRX—IRRADIATED SEMI-RIGID POLYOLEFIN

Shrink ratio 2 to 1 (expanded to recovered diameter) Temperature range: from 135°C/275°F to —55°C/—65°F

This material is designed for strain relief applications and protection of delicate components. It will not cold flow, never melts, and will not split on applications within temperature range. It has better gripping power and tensile strength than HIX Irradiated Polyolefin, HCX Irradiated Vinyl and HVX Vinyl.

HRX is supplied in two classes:
I-Flame Retarded II-Clear (not flame retarded)

Catalog #HCX—IRRADIATED FLEXIBLE VINYL

Shrink ratio 2 to 1 (expanded to recovered diameter) Temperature range: from 105°C/220°F to —20°C/—5°F

HEATRAX®

HEAT SHRINKABLE TUBING

This general purpose material is more flexible and less expensive than HIX Irradiated Polyolefin. Compared with HVX Flexible Vinyl, it is superior in flexibility and crack resistance and has slightly better mechanical strength.

Catalog #HVX—FLEXIBLE VINYL

Shrink ratio 2 to 1 (expanded to recovered diameter) Temperature range: from 95°C/200°F to —10°C/15°F

This material has the lowest shrink temperature and the lowest cost of all HEATRAX tubing. HVX is offered in 4 colors.

TEFLON HEATRAX:

Flexible Teflon is primarily for use in high thermal and difficult chemical environmental applications, or where a low coefficient of friction is desirable. It provides excellent electrical insulation, has excellent chemical and solvent resistance. It has the widest temperature range, best dielectric and corrosion resistant properties of all HEATRAX tubings. Temperature range of all Teflon HEATRAX is from 260°C/500°F to —65°C/—85°F.

The following types of Teflon HEATRAX are available:

Cat. #HTX-Thin Wall Teflon (AWG sizes)—Shrink ratio 1½ to 1 (expanded to recovered diameter)
Cat. #HSX-Stand. Wall Teflon (AWG sizes)—Shrink ratio 1½ to 1 (expanded to recovered diameter)
Cat. #HFx-4x Teflon (fractional sizes)—Shrink ratio is 4 to 1 (expanded to recovered diameter)

**SHRINKING METHODS
HEAT GUN & ACCESSORIES**

Excellent results may be obtained by dipping HEATRAX in hot liquids, by oven heat, infrared heat, or open flame. However, the HEATRAX Heat Gun offers the easiest method of applying heat to all types of shrinkable tubing.

HEATRAX Heat Gun:

The HEATRAX Heat Gun is a flameless hot air torch — lightweight and mobile — or adaptable for permanent mounting. Three models, with different temperature ranges, are available. All models have adjustable air volume control and a three-way switch (hot-cool-off). All Heat Guns operate on 115V, 50/60 cycles and deliver an air volume of 35 CFM with a velocity of 3000 FPM.

Cat. #	Current (Amp.)	Temperature Range		Price Each
		°C	°F	
HG-103	12	150/260	300/500	\$40.25
HG-105	14	260/400	500/750	45.35
HG-107	18	400/525	750/1000	56.25

In addition, adaptors for the Heatgun (shown below) have been developed to concentrate heat in specific application areas.

ICORE
ELECTRO-PLASTICS, INC.

a subsidiary of ICORE INDUSTRIES

This expandable spiral-cut plastic wrap harnesses, insulates and protects wire assemblies up to 8" diameter.

HARNESSING:

Spiral Wrap applies a strong grip developed both from its torsional cut and the memory of plastic materials used. It retains its strength under repeated flexing and bending, follows wire paths easily, and makes neat, free-running cables. It is extremely useful on long continuous runs where many leads are required; wires can enter or break out at any point. Spiral Wrap can be removed easily for trouble shooting and then re-applied.

PROTECTION:

Spiral Wrap is available in materials which accommodate a heat range from -265°C/-450°F to 260°C/500°F for insulation purposes. It is also available in materials with high abrasion resistance and in materials for use outdoors where resistance to ultra-violet rays is required.

SPIRAL WRAP®

MATERIAL DESCRIPTION

Polyethylene Versatile, low cost material
Polyethylene, black In addition to above, this material is designed for outdoor use. It resists ultra-violet rays. Oper. Temp. -75°C/-105°F to 100°C/215°F.
Rulan (carbon impregnated polyethylene) Used primarily in applications where a low cost self-extinguishing material is required. Oper. Temp. -25°C/-10°F to 95°C/200°F.
Nylon, natural This material offers best mechanical protection; also has a higher temperature rating than polyethylene. Oper. Temp. -100°C/-150°F to 150°C/300°C.
Nylon, black In addition to the above, this material is designed for outdoor use; it resists ultra-violet rays. Oper. Temp. -100°C/-150°F to 110°C/230°F.
Teflon Primarily used in high temperature applications; also has an extremely low operating temperature, excellent dielectric properties and is not affected by organic solvents or acids. Oper. Temp. -265°C/-450°F to 260°C/500°F.

TUBING

VINYL, FIBERGLASS & TEFLON

ICORE offers a complete line of Vinyl, Fiberglass, and Teflon tubing for electrical insulation applications.

	Cat. #	Class	
Vinyl	SLV-105	A	Low cost, high temperature vinyl for applications up to 105°C/220°F.
	SLV-40	—	Low temperature vinyl for applications down to -65°C/-85°F.
Fiberglass	SLV-130	B	Grade B Abrasion resistant fiberglass tubing for applications up to 130°C/225°F.
	SLV-1200	C	Tightly braided 100% fiberglass tubing for applications up to 650°C/1200°F.
Teflon		C	Excellent electrical insulating properties, good flexibility, chemical inertness for applications up to 260°C/500°F.
	STT		Teflon thin wall
	STS		Teflon standard wall
	STL		Teflon lightweight (extra thin wall)
	TTF		Teflon tubing in fractional sizes (heavy wall).

CAT. #SLV-1200 HIGH TEMPERATURE, CLASS C

This sleeving of tightly braided 100% fiberglass is for use in temperatures up to 650°C/1200°F. Closely woven construction provides maximum abrasion resistance with high flexibility. Material is treated to remove all organic matter and to render the glass braid fray resistant. Material available in double wall on request.

VINYL TUBING

CAT. #SLV-40 LOW TEMPERATURE

An extremely flexible material designed primarily for low temperature applications (-65°C/-85°F), with continuous rating of 80°C/175°F. Widely used in applications where all purpose vinyls lose their flexibility.

FIBERGLASS TUBING

CAT. #SLV-130 CLASS B, GRADE B

This combination of fiberglass and plastic insulation material has good abrasion resistance, excellent cut through characteristics, and ends will not fray. Widely used in applications up to 130°C/265°F where tubing is subject to knotting, bending and high torque.

Conforms to: MIL-I-3190B

ICORE

ELECTRO-PLASTICS, INC.

a subsidiary of ICORE INDUSTRIES

Teflon is rated for continuous operation at 260°C/500°F. A hot soldering iron will not shrink back Teflon as frequently happens with conventional thermoplastic materials. In addition, Teflon has an excellent low temperature rating (-65°C/-85°F).

TEFLON TFE TUBING

ICORE Teflon tubing offers the exceptional combination of properties inherent in Teflon: heat resistance, excellent electrical insulating characteristics, flexibility, and good abrasion resistance. Special extrusion techniques produce pinhole-free tubing of uniform concentricity which assures maximum mechanical and electrical protection.

ICORE Teflon tubing has high resistance to flexural fatigue and stress, will not absorb moisture and has lowest coefficient of friction of all materials. Ideal for applications where heat resistance, flexibility, excellent dielectric values, and chemically inert properties are required.

LACING TAPE and CORD

Catalog #LTN—Flat Braided Nylon Tape LCN—Round Twisted Nylon Cord
LTD—Flat Braided Dacron Tape LCL—Round Twisted Linen Cord
LTT—Flat Braided Teflon Tape LCV—Round Vinyl Cord

a subsidiary of ICORE INDUSTRIES

General Description

Flat Braided Tape—Designed to create a wider contact area with insulation so tape does not slip away from contact point. It is more flexible than cord and easier on the user's hand. Flat tapes do not appreciably increase the diameter of the cable. Recommended for all types of harness work.

Round Twisted Cord—Suited particularly for wires having a secondary insulation or those utilizing a textile as an insulation material. It may also be used for plastic and rubber insulated wire.

Materials

Nylon—synthetic fiber resistant to fungus and most acids, with excellent tensile strength and abrasion resistance.

Dacron—has all of nylon characteristics, as well as better acid resistance, less elongation and less susceptibility to discoloration.

Linen—Available in cord only, has less stretch than nylon and dacron and is excellent for serving heavy cable and ropes. Also used for lacing wire bundles where a stiffer tie is required, as in switchboards, motors, etc.

Zipper tubing is an ideal jacketing material to enclose, insulate, waterproof, shield, mark and identify wire and cable assemblies. The wrap-around, quick zip characteristics allow wire harnesses to be covered at any point, even after connections have been made. The closure device is a zipper running along the zipper track which permits easy re-entry for inspection or modification. Zipper track may

* Also available in grade A and B on special order

Teflon—a specially developed fiberglass flatbraid of Teflon coated yarns designed for high temperature applications up to 260°C/500°F. Teflon is bonded to fiberglass to keep tape from fraying. Vinyl—inexpensive material used in bundling and harnessing wires.

Finishes—the function of the finish is to permit easier handling of the material (reduce fray), and improve knot retention.

ICORE Standard MW Finish—A micro-crystalline wax with melting point above 55°C/130°F and non-flaking characteristics. It is compounded to develop excellent knot retention, yet not give a waxy feel to user.

Special PVA Finish—Polyvinyl acetate resin with a melting point above 175°C/350°F for use where a wax-free type or higher operating temperature is specified.

Special HPVA Finish—(Similar to GE) Polyvinyl acetate with a heavier finish which permits easier handling and better knot retention.

Special SR Finish—A special coating of fungistatic synthetic rubber containing no corrosive compounding ingredients. It has best knot characteristics of all materials, along with good non-dusting or flaking properties. Being soft and pliable, it will not injure user's hands.

CONTINUOUS STRIP GROMMETS

Gromstrip is a continuous length of extruded U-channel for use as a protective covering on sharp edges. It can be cut to desired length and easily inserted into any hole, regardless of shape or configuration. (On angles less than 90°, miter the two outside edges for better fit). Gromstrip requires minimum space, grips surfaces snugly, and won't jar loose. Wherever wires pass through a metal piece, Gromstrip used on the sharp edges will eliminate cutting and fraying of the wires. The use of continuous strips sharply reduces inventory of stock grommets. The addition of sizes #6 and #7 now allows the use of Gromstrip up to 1/2" thickness.

GROMSTRIPS®

New tough polyethylene see-thru dispenser pak allows users to pull out enough material for requirements; a quick glance tells when to re-order.

Polyethylene—used for general application

Nylon—used where a particularly tough and abrasive resistant material is desired; it has a higher operating temperature, and better dielectric constant than polyethylene.

Teflon—used for high temperature applications. Available on quotation only.

GROMMETS, VINYL

MIL-SPEC

Multiple Conductor Cables!

National Wire & Cable Corporation manufactures a complete line of multiple conductor control cables. Conductors are of tinned copper strand with primary insulation for use up to 105°C per MIL-W-16878D Type C. Insulated for 1000 volts working voltage. Conductors are color coded using 10 standard basic colors, plus spiral tracers on white per MIL-STD. 122.

All conductors are planetary cabled and contra-helically laid with a Mylar tape serve over the cable bundle. The overall jacket is a 105°C black Thermoplastic or may be Neoprene to MIL-R-6855 Class 2 Grade 60 specification, (Neoprene extra cost.)

SHIELDED CABLES

National Multiple Conductor SHIELDED CABLES are to the same specifications as above with addition of tinned copper braided shield over cable complex with 85-90% coverage to MIL-C-7078A. STANDARD PUT-UPS: 500 ft. and 1000 ft. No-deposit reels.

TECHNICAL DATA (all cables)

Insulation Breakdown Voltage:	Greater than 8000 volts AC RMS, 60 cps.
Capacitance:	Nominal capacitance from a wire to all else in the cable ranges from 40 to 65 mmfd per ft., @ 1000 cps; dependent on cable construction.
Insulation Leakage Res.:	200. megohms/1000 ft. min. at 500 VDC from any conductor to all else in cable.
Sheath Leakage Res.:	10. megohms/1000 ft. min. at 500 VDC from overall shield through sheath to outside world.
Useable Temp. Range:	Suitable for continuous use from +105°C to -55°C.
Cold Bending Capability:	All cables are suitable for flexing to a circle diam. of approx. 6 cable diameters from +105°C to -20°C; Recommended flex diameter should be greater than 20 cable diam. for flexing at -40°C., or for continuous flexing service to -55°C, specify our neoprene sheath, in lieu of plastic sheath.

MULTI-CONDUCTOR STOCK CABLES

Conductor sizes 22, 20, 18, 16, 14 & 12 gauge. 22 AWG is 7 strand. All others 19 strand.

INSULATION

EXTRUDED VINYL AND TEFLON TUBING

SIZES: #24 through 2½" Diam.

PUT-UP: #24 to ¾" on spools, completely sealed in plastic wrapping. Size ¾" to 2½" in tied coils.

SPEC. Vinyl +105°C to -32°C Type: MIL-I-631C, ASTM-D922 Grade C

GRADES: Vinyl + 80°C to -55°C Type: MIL-I-7444B, MIL-I-22076

Teflon +250°C to -55°C Type: MIL-I-22129B (#20 to #2)

NATIONAL OPENLINE

DESIGNED FOR COMMERCIAL TV DISTRIBUTION SYSTEMS AND RF POWER TRANSMISSION

Specifications: two inch spacing between conductors . . . 12 gauge copperweld . . . 470 ohm impedance . . . attenuation: 150 mc 0.25 DB PER 100 FEET, AT 30 mc 0.1 DB PER 100 FEET. Velocity factor 0.975 . . . copperweld steel for maximum strength and electrical stability, and to insure permanent uniform performance. . . Spreaders are brown polystyrene, spaced at average five foot intervals, staggered slightly to avoid spurious resonances.

Also 1" & ½" copper line for TV leadin Formvar coated.

COMPLETE WIRE AND CABLE INVENTORY ALWAYS AVAILABLE FOR IMMEDIATE SHIPMENT!

National Wire and Cable Corporation maintains one of the largest and most complete stocks of electronic and aircraft wire and cable in the nation. Total footage of floor stocks exceeds 50 million feet!

Your immediate source for "MIL and Jan-Spec" wires, coaxial cables and vinyl sleeving.

Special color coded, shielded and jacketed combinations of hook-up wire and multi-conductor cables can be made to your specifications and delivered promptly without delay.

DISPENSER-PACKAGED TRANSMISSION LINE**TANGLE-FREE SELF-DISPENSING WIRE PACKAGES**

These easy to handle wire dispenser packages let you take the exact length you need. The rest stays neatly in place... never tangled, always clean. Ask your Saxton representative about the special dispenser "LIFELINE" series of wire packages.

***LIFELINE TWIN LEAD****No. 1665**

Full size, heavy duty deluxe twin lead constructed of the finest materials. Chemically protected against deterioration. In Magic Dispenser. Saxton LTL (100-ft.), Brown

LIFELINE 100* ROTOR CABLE

* Available 1000' spools.

No. 1666

Extra heavy duty 4-conductor rotor cable. Superior quality. One leg polarized for easy reference. Sold in exclusive Magic dispenser carton.

Saxton L4FC (100-ft.), Brown

**SHORT WAVE LISTENING ANTENNA**

COMPLETELY ASSEMBLED...
READY FOR INSTALLATION
AND USE

#4301

Can be mounted almost anywhere... pole-to-pole, pole-to-tree, garage-to-house, under the eaves, in the attic, etc. Scientifically tuned for 1.8 to 30 mc coverage. Antenna package includes 50 feet of copper wire, attached at both ends to low-loss insulators. Attached to each insulator is 15 feet of waterproof non-stretch rope for mounting the antenna. At one end of the antenna is 50 feet of insulated copper lead-in wire. Comes with detailed instructions.

COLORWIRE TRANSMISSION LINES

Provides Maximum Transfer of Signal Energy from Antenna to Set
GOOD FOR VHF; EXCELLENT FOR UHF; SUPERB FOR COLOR TV

A full range of quality, low-loss transmission lines and accessories that answer all-channel and color reception problems. See details of each type below:

1. SUPER TWIN FOAM #1037

Porous, low loss, air-filled foam dielectric separates two pre-stretched heavy duty copper conductors. Overall ultraviolet resisting, carbon black filled outer polyethylene jacket makes for abrasion resistant, highly flexible, highly efficient (20 year guarantee) transmission line in wet or dry weather. Adequate for all normal color requirements; needs no transformers. Excellent VHF; good UHF; excellent color.

Attenuation per 100 feet at 200mc — 1.1 db; at 500 mc — 3.1 db; at 900 mc — 3.99 db.

Put Up: "500 or 1000 foot spools."
Convenient 50, 75, or 100 foot hanks.

2. SHIELDED TWIN FOAM #1038

Same general characteristics as #1037 except for overall 99 per cent braid shield plus additional abrasion-free overall jacket. Ideally suited for noise-free UHF, FM and multiplex; excellent for smear-free color TV reception.

3. FOIL SHIELDED TWIN TRANSMISSION LINE WITH GROUND RUNNER #1041

Very similar to #1038 except that shielding material is aluminum foil — mylar backed as opposed to regular tinned copper braid. Highly efficient (100% coverage), more economical. Good for UHF, VHF or color.

4. S-906 COLORIFIC 450 OHM INSULATED OPEN WIRE TRANSMISSION LINE KIT

The best of all transmission lines. Reliable, efficient, lowest loss, perfect for any type of service — UHF, VHF or color. Lowest attenuation, lowest leakage path. Includes 450/300 ohm and 300/400 ohm matching transformers. Easy to install. Has 18 gauge solid non-stretch copperweld conductors and carbon black filled polyethylene insulation. One transformer used at antenna; the other installed at window leading to TV set, and from 300 ohm side of this transformer regular 300 ohm twin lead is brought directly to set.

Tried and true under the most adverse conditions. This line most nearly approaches perfection in transmission lines. Attractively packaged to command attention.

USES #1562 LADDER WIRE; FOR DETAILS SEE LISTING FOR #1562 ON PAGE 4.

5. COLORIFIC FACTORY SWEPT COAXIAL CABLE SYSTEMS

Uses #1594 RG-59-U Foam

Designed particularly for noise problem areas. Basic impedance 72 ohms. Low loss dielectric construction to cut down attenuation and signal leakage. Unaffected by stray fields and proximity to metals. Good for VHF and color, adequate for UHF. Complete with factory installed terminations and weather boot, with or without indoor and outdoor 72/300 ohm matching transformers. Attractively packaged.

#1598 — specially designed, new 72 ohm all-channel coax for full 82-channel use. Slightly higher cost, much more efficient.

SAXTON NO.	DESCRIPTION	FEET
S-900	Low loss, foam-filled RG 59/U complete with pre-attached F59 fittings each end, weather boot and complete instructions. Uses #1594.	100
S-901	Same as above.	75
S-902	Same as above.	50
S-903	Same as above, including two 72/300 ohm matching transformers — one for outdoor use, one indoor, complete with mounting hardware.	100
S-904	Same as above.	75
S-905	Same as above.	50
S-907	All-channel (82 channel) coax complete with terminal fittings on each end, weather boot, and complete instructions. Uses #1598.	100
S-908	Same as S-907	75
S-909	Same as S-907	50
S-910	Same as S-907, except includes two special matching transformers — one for indoor; one outdoor. Also includes matching fittings and hardware.	100
S-911	Same as S-910	75
S-912	Same as S-910	50
S-330*	Indoor matching transformer — matches 75 ohm coaxial cable to 300 ohm terminals on TV receivers — includes fittings and mounting hardware. For UHF, VHF, color.	
S-331*	Outdoor matching transformer — matches from 300 ohms to 72 ohms — connects from antenna to transmission line — includes fittings and mounting hardware. For UHF, VHF, color.	

*Use with all S-900 Series except S-906.

SPECIAL SELF-SERVICE DISPLAYS

ATTRACTIVELY COLORED • CUSTOMER CONVENIENCE EASY TO INSTALL • MODULAR DESIGN

Two feet wide, four feet high — easy to see over. Joining units four inches wide makes it possible to modularize display panels, and also to break up different categories of products for maximum eye appeal, greatest impulse value, largest turnover.

Saxton's displays are designed for breakdown into category types. And you can add additional display units as needed. "Look up" shelf provides easy customer viewing of bottom level displays.

Complete information on request. Ask your Saxton representative for full lists of products in the following display categories: CB and Ham; Telephone Items; General Wire Types for the Engineer and Experimenter; Audio and Hi-Fi; Modules; TV Antenna Wires and Antenna Accessories; Special Purpose Types — Toys, Hobbies, Etc.; General Purpose Types for Display in Hardware, Lumberyard, Chain and Discount Outlets.

WINDOW-PAKS

Saxton's "S" and "TS" Series of Window-Paks keep the products clean and tangle free . . . and increase sales turnovers.

These quality products cover a wide selection of wire and cable products as well as a wide variety of in-demand cable and hardware assemblies. Properly displayed and serviced, these items generate maximum sales with minimum sales time.

THESE WINDOW-PAKS ARE USEFUL FOR:
 SERVICEMEN, TECHNICIANS, ENGINEERS,
 STUDENTS, HOBBYISTS AND HAMS.

TS-50	Twin lead—300 ohm—for improved FM or T.V. reception—brown, clear, gold & silver	50	50
TS-75	Twin lead—300 ohm—same as above	75	20
TS-100	Twin lead—300 ohm—same as above	100	20

WIRE DISPENSER PACKAGES

UNI-SPOOL
WIRE BANKS

TRI-SPOOL
WIRE BANKS

A wide variety of wire and cable products are available in Saxton's two types of self-dispensing wire banks . . . the Uni-Spool and Tri-Spool. These packages provide easy access to desired lengths of wire and cable.

Saxton No.	Description	Feet	Std. Case
UNI-SPOOL "WS" SERIES			
WS-100	Cable — miniature parallel — 24 ga. — available in black, brown, gray, white and clear	50	36
WS-101	Microphone cable — lapel	20	36
WS-108	Audio cable — wrap shield — easily pigtailed — available in other colors	20	36
WS-112	Phono or grid wire — shielded — single conductor	30	36
WS-113	High voltage wire — 20 KV rating — flame retardant	20	36
WS-115	Hook up wire — 18 ga. solid	55	36
WS-115B	Hook up wire — 18 ga. stranded	52	36
WS-116	Hook up wire — 20 ga. solid	72	36
WS-116B	Hook up wire — 20 ga. stranded	70	36
WS-117	Hook up wire — 22 ga. solid	90	36
WS-117B	Hook up wire — 22 ga. stranded	85	36
WS-118	Bell wire — 18 ga.	58	36
WS-122	Test prod wire — red — plastic	22	36
WS-122A	Test prod wire — red — rubber — extra flexible	16	36
WS-123	Test prod wire — black — plastic	22	36
WS-123A	Test prod wire — black — rubber — extra flexible	16	36
WS-156	Three conductor, clear, miniature, parallel cable speaker extensions — stereo and monaural — low voltage applications	36	36
WS-162	Magnet wire for hobbyists — 22 ga.	114	36
WS-163	Magnet wire for hobbyists — 24 ga.	153	36
WS-164	Magnet wire for hobbyists — 26 ga.	243	36
WS-170	Rainbow wire — two color, two conductor	38	36
WS-171	Rainbow wire — three color, three conductor	29	36
WS-172	Rainbow wire — four color, four conductor	25	36

WBS-119	Hook up wire — 3 colors — 24 ga. solid — high quality	108	36
WBS-120	Hook up wire — 3 colors — 24 ga. stranded — high quality	96	36
WBS-121	Bell wire — 3 colors — 22 ga. — high quality	69	36
WBS-122	Test prod wire — plastic — 3 colors	27	36
WBS-123	Test prod wire — rubber — extra flexible — 3 colors	24	36
WBS-129	Bell wire — 3 colors — 20 ga. — high quality	54	36
WBS-131	Bell wire — 3 colors — 18 ga. — high quality	48	36
WBS-170	Phono pickup wire — stereo arm assortment	lib. qty.	36
WBS-172	Bus wire — tinned — 20, 22 and 24 ga. — electrical or electronic applications — highly conductive — easily soldered — home or factory bench	108	36
WBS-175	Hook up wire — Nylon — assortment — high temp	60	36
WBS-180	High temperature wire — Teflon coated — assorted colors — 3 packages	69	36

TRANSISTORIZED MODULES

Each module is an assembled package of electronic components—transistors, resistors, capacitors, etc. All can be powered by standard 6 volt battery pack. Each module comes with an instruction book including schematic drawings and parts list.

Saxton Model	No.	Use	Description
HFA	570	Fire alarm	When hooked up to 2 or 3 speakers, makes any room or area safe against unexpected fires.
HS	571	Siren	Creates tone varying from 50 to 3000 cycles during 30-second period, using 8 ohm speaker.
HCO	572	Code OSC & Key	Produces sharp, crisp signal for transmitting code, using any PM speaker.
HPA-1	573	Public address	Amplifies and produces quality audio signal with power output of about 1 watt, using 8 ohm speaker, carbon button microphone.
HDF	574	Dual Flasher	Permits 2 signal devices to flash alternately or give warning 70-80 times per minute, using pilot light bulbs.
HP	575	Phono amplifier	Amplifies signals produced by phono pickup arm so that loud speaker reproduction is possible.
HI	576	Intercom	An economical way to carry on conversations efficiently between 2 points, using 2 8-ohm speakers and talk-listen switches.
HB	577	Baby nurse	Monitors an infants' desire for recognition, using 2 8-ohm speakers.
HPA-2	578	High gain public address	Provides clear audio, using 8-ohm speaker or trumpet.
HG	579	Guitar amp	Amplifies music from guitar or accordion, using contact microphone and 8 or 16 ohm speaker.
HTA	580	Telephone amp	Amplifies telephone conversations, useful for conference calls.
HM	581	Metronome	Produces sounds for maintaining proper musical beat; generates 20-200 audio pulses per minute.

Saxton Model	No.	Use	Description
HFH	582	Fog Horn	Creates loud attention-getting signal which can be heard and identified over long distances on land or sea, using 8 or 45 ohm speakers.
HWM	583	Wireless Mike	Transmits signals from point-to-point with no physical connection between transmitter and receiver, using an AM radio.
HWP	584	Wireless Phono oscillator	Allows phono pickup and arm to be played through any radio with no physical connections, using any radio receiver.
HWB	585	Wireless baby nurse	Amplifies infants' restless movements or requests for attention with no physical links between module and a radio receiver.
HMP	586	Mike preamp	Serves as booster for low level signal producing devices such as microphones, magnetic phonograph cartridges, etc.
HBA	587	Burglar Alarm	Warns against intruders with switches installed at various entrances, using 3, 8 or 16 ohm speakers.
HT	588	Electronic timer	Permits holding back or controlling time from one second to three minutes for dozens of situations — such as turning off T.V. sets during commercials.
HST	589	Stroboscope	Permits viewing of rapidly moving objects such as motors as if they were standing still for measurement, calibration, etc.
HPS	590	Power Supply	Delivers 6-12 volts continuously at 1 amp, hum-free, plug-in, reliable source for powering all modules.

SPECIAL PRODUCT SECTION

"MITY-AMP" 2-WATT AUDIO AMPLIFIER

MA-100

**COMPLETELY EPOXY ENCAPSULATED
MODULE • Shockproof & Moisture-proof
• Dirt & Dustproof**

FEATURES

- **SPACE-SAVING**—2" x 3 1/4" x 3/8"
- **HI-FI AMPLIFIER**—20 cy. to 15KC $\pm$ db at 1-watt level
- **LIGHTWEIGHT**—Weights total of 6 ounces
- **RUGGED**—Unconditionally guaranteed. Shock, moisture and dust-proof
- **EASY TO INSTALL & USE**—Hooked up in minutes. Simple instructions make unit functional immediately.
- **ECONOMICAL**—Low in price, big in performance. Long, trouble-free life. Total power requirements 6 or 12 volts.
- **PORTABLE**—Operates on auto or boat battery
- **VERSATILE**—Uses limited only by your ingenuity. Ideal for p. a. system, phono amplifier, stereo, intercom, signal tracer, modulation, tape monitor, etc.

SPECIFICATIONS

1. **INPUT VOLTAGE REQUIRED TO DRIVE FULL POWER**—5 Volts
2. **POWER REQUIREMENTS**—6 to 12 volts at 300 to 700 ma. Current determined by speaker voice coil impedance.
3. **FREQUENCY RESPONSE**—20 cy. to 15 KC $\pm$ 2 db at 1 watt level.
4. **INPUT IMPEDANCE**—45 ohms to 50K ohms.
5. **OUTPUT IMPEDANCE**—3.2 to 45 ohms.
6. **WEIGHT**—Six ounces.
7. **OVERALL SIZE**—2" x 3 1/4" x 7/8".
8. **HIGHLY SHOCKPROOF**—Unaffected by dust, dirt or moisture. Operable under water.
9. **GUARANTEED AGAINST DEFECTS.**

ANTENNA ACCESSORIES SPECIAL HARDWARE

GROUND MAST CLAMPS

Saxton No. 1100

U-BOLTS AND SADDLES

Saxton No. 1103
Also available without saddle

TV ANTENNA MATCHING BALUN COILS

Efficiently matches 72 to 150 ohms; 72 to 450 ohms; 150 to 300 ohms; 150 to 450 ohms; 300 to 450 ohms and 75 to 300 ohms. Eliminates standing waves. Use as set coupler, impedance transformer or for line matching, etc. Instructions included. Available in bulk or pairs. Saxton No. 1121

FLOATING GUY RINGS

Cast aluminum, two-piece floating guy ring. Fits most masts up to 1 1/2" dia. Individually packed, complete with hardware, in plastic bags. Saxton No. 1099

GROUND RODS

Saxton No. 1064
Four-foot overall length with clamp.

ANTENNA WINDOW STRAPS

Saxton No. 1126

BROWN, PORCELAIN GLAZED INSULATOR

Saxton No. 1154

Doublet type antenna insulator, white glazed. Excellent electrical characteristics, high tensile strength. Dim.: 4 1/2" x 2 1/4" Saxton No. 1155

Transposition block with porcelain glaze finish. Use with many types of doublet antennae. Saxton No. 1157

Film & Recording Tape STORAGE CHEST

Saxton No. 1230—Complete with 12 Swivel-locked, dust-proof storage cans. Insures moisture and dust-free storage of valuable tape and film. Attractive indexed storage chest. High-impact Styrene containers accommodate 5" and 7" tape or 8mm film

Saxton No. 1231—Individual plastic storage can

6-PAK TAPE STORAGE CASE

Saxton No. 1234

Sturdily constructed, indexed Tape Storage Case designed for bookshelf. Compartmented to accommodate six 7-inch reels, boxes or cans.

Saxton No. 1235
Complete unit. Includes above Case plus six Saxton No. 1231 Tape Cans.

OPEN LINE ACCESSORIES

STAND-OFFS & STRESS INSULATORS

No. 6001

No. 6003

No. 6005

#6000

BLOCKS ONLY WITHOUT DRIVE-IN HARDWARE

Complete with 2 plated screws for use as spacer blocks in making your own open line installations.
 Saxon No. 6000

Especially designed for use with open line transmission wire installations. Tighten screws after pulling wire taut. For use as spacer, partially tighten set-screws. This permits movement of wire in the slots and avoids potential wire breaks. Use outside slots for 600-ohm wire. The "Tappee" Stand-off insulator is good for community installations where random spacing of open line is desirable to avoid tuned circuits. Ideal also for use as anchor point or spacer for "fence wire" installations. "Tappee" permits inexpensive, time and labor-saving, trouble-free installations, and is made for use with No. 12 thru No. 18-gauge wire. Hardware constructed of double-dip galvanized steel; block is high impact polystyrene.

6000 Block only

6001 5 1/2" nail type

6003 5" wood screw type

6005 5" pole clamp type

*6007 INS-500 type

SEE PAGE 4 FOR INSULATED OPEN WIRE TYPE INS-500.

OPEN LINE ACCESSORIES

STRESS INSULATORS AND BLOCKS

#6010

HEAVY DUTY OPEN LINE STRESS INSULATORS

Plastic blocks, slotted on either one or two-inch centers, for taking up slack or as anchor points in open line installations. Complete with plated lag bolt. 12 or 14 gauge. Saxon No. 6010

#6011

12 AWG INSULATOR

Same as Saxon No. 6010. Has 2-inch spacing for #12 AWG wires. Insulators for other gauges available on special order only.
 Saxon No. 6011

FIBRE GLASS GUY LINE

Non-radiating, non-absorbing, high-strength "wireless" guy wire in vinyl jacket. 500-lb test strength. 100-ft. coil.
 Saxon No. 7000

SUPER-STRONG FIBRE GLASS GUY WIRE

Same as above but in grey vinyl jacket. 1000-lb. tensile strength. 100-ft. coil.
 Saxon No. 7002

PATIO SPEAKER BAFFLE

Saxon No. 1205

Made of unbreakable, high impact styrene. Mahogany color. Complete with hardware and mounting instructions. Use for paging, monitoring, patio and stereo extensions, or as extension speaker anywhere. Complete with mounting escutcheon for 5 x 7, 6 x 9, 4, 5 or 6" round speakers.

DELAYED ACTION • COMMERCIAL SAFETY SWITCH

Switch "off" and the lamp goes out SIXTY SECONDS LATER! Allows sufficient time to reach destination SAFELY. Replaces present wall switch in seconds. Ideal for Home, Farm or Cottage. Fully guaranteed and UL Approved.

Saxon No. 560 (Ivory) or
 Saxon No. 561 (Brown)

SPECIAL PRODUCT SECTION

SHIELDED TWIN LEAD

Saxton No. 1118—Each conductor #20AWG. Features abrasion-proof Vinyl jacket. Delivers noise-free signal on FM, FM Multiplex, TV.

100-ft. coil

1000-ft. spool

TELEPHONE WIRE

Saxton No. 1009 — 2-conductor, stranded for indoor or outdoor use.

LOW LOSS UHF LIFELINE TUBULAR TWIN LEAD

(Deluxe)

Heavy duty brown PE designed for UHF use. 20-gauge.

Saxton No. 1010

CORROSION AND
CHEMICAL RESISTANT

"SEACOASTER" TV & FM TWIN LEAD

Designed to resist air-borne corrosives and chemical reactions. 300-ohm 20 gauge (7 x 28) copper conductors encased in low loss PE foam and tough, brown outer jacket.

Saxton No. 1017—100-ft. coil.

Saxton No. 1017—1000-ft. spool

HEAVY DUTY SHIELDED IGNITION WIRE

Saxton No. 1008 — For ham or CB applications. Reduces noise.

100-ft. coil

LOW LOSS LIFELINE "SPONGEE" TWIN LEAD

(Deluxe)

Designed especially for UHF, "Spongee" provides stronger signals on VHF. 300-ohm 20-ga. stranded copper conductors encased in porous, low loss PE foam.

Saxton No. 1016/100
(100-ft. coil)

Saxton No. 1016/1M
(1000-ft. spool)
